This brief provides methods for harnessing Twitter data to discover solutions to complex inquiries. The brief introduces the process of collecting data through Twitter's APIs and offers strategies for curating large datasets. The text gives examples of Twitter data with real-world examples, the present challenges and complexities of building visual analytic tools, and the best strategies to address these issues. Examples demonstrate how powerful measures can be computed using various Twitter data sources. Due to its openness in sharing data, Twitter is a prime example of social media in which researchers can verify their hypotheses, and practitioners can mine interesting patterns and build their own applications. This brief is designed to provide researchers, practitioners, project managers, as well as graduate students with an entry point to jump start their Twitter endeavors. It also serves as a

convenient reference for readers seasoned in Twitter data analysis.

" When attorney Jeffrey N. Gingold misplaced his wife on the living room couch, and became lost while driving just blocks from his home, little did he know that he was experiencing a hidden symptom of multiple sclerosis: cognitive difficulties. Facing the Cognitive Challenges of Multiple Sclerosis is a courageous and compelling personal account of one man's anguishing struggle with this aspect of the disease. It was written for the silent majority of MS patients who are privately dealing with MS cognitive symptoms and potential disabilities. The National Multiple Sclerosis Society estimates that over 400,000 people in the U.S. have been diagnosed with multiple sclerosis, and there are millions more worldwide. Conservatively speaking, half of them will encounter varying degrees of cognitive difficulties. Facing the Cognitive Challenges of Multiple Sclerosis brings this hidden disability into the open. It is an essential resource that will educate individuals coping with multiple sclerosis, and inform their families, caregivers, doctors and therapists. The new edition has been thoroughly revised and updated for

medical accuracy. The book includes a new foreword written by Joyce Nelson of the National Multiple Sclerosis Society (NMSS) and two completely new chapters that follow Jeffrey's journey since 2006. Not only did he become more active in the movement to cure MS, he also became more disabled, and ended up switching to a more controversial MS treatment, that has, so far, made his disease go back into remission. Whether or not a person is dealing with the cognitive issues associated with multiple sclerosis this book deserves to be on the bookshelf of every individual who is dealing with multiple sclerosis. The first woman and Asian to win the Commonwealth Prize, Among the White Moon Faces is an autobiography that chronicles the confusion of personal identity—linguistically, culturally, and sexually. The English-educated child of a Chinese father and a Peranakan mother, Lim grew up in post-colonial Malaysia with a tangle of

names, languages and roles. The deep-seated, cross-cultural ironies of this fragmented identity also echo throughout this memoir; from the love-hate relationship she shares with a neglectful father and an estranged mother, the pain of hunger suffered during childhood, to her Anglophile education and the loneliness of cultural displacement. Lim eventually finds reconciliation in her perpetual exile, using the solace of writing to create a sense of place and to counter the pull of ancient ghosts.

For almost three decades, Roger Pressman's Software Engineering: A Practitioner's Approach has been the world's leading textbook in software engineering. The new eighth edition represents a major restructuring and update of previous editions, solidifying the book's position as the most comprehensive guide to this important subject. The eighth edition of Software Engineering: A Practitioner's Approach has been designed to consolidate and restructure the content introduced over the past two editions of the book. The chapter structure will return to a more linear presentation of software engineering topics with a direct emphasis on the major activities that are part of a generic software process. Content will focus on widely used software engineering methods and will de-emphasize or completely eliminate discussion of secondary methods, tools and techniques. The intent is to provide a more targeted, prescriptive, and focused approach, while attempting to maintain SEPA's reputation as a comprehensive guide to software engineering. The 39 chapters of the eighth edition are organized into five parts - Process, Modeling, Quality Management, Managing Software Projects, and Advanced Topics. The book has been revised and restructured to improve pedagogical flow and emphasize new and important software engineering processes and practices.

Multiple sclerosis is the most common cause of neurological disability in young and middle-aged adults. This fully updated and revised new edition provides a detailed account of the many neuropsychiatric disorders associated with MS and is relevant to both the research and the clinical setting. Using the latest brain imaging findings and results from treatment trials, the symptoms, assessment, diagnosis, and treatment of depression in MS are covered, as are psychosocial factors and the link between depression and MRI abnormalities. Subsequent chapters focus on cognitive dysfunction in MS, including the natural history of cognitive change, the use of screening instruments and neuropsychological batteries, brain imaging correlations and management strategies. The book concludes with a survey of the behavioral benefits and risks associated with disease-modifying drugs. It will be valuable to all mental health professionals, neurologists, and others caring for those affected by MS.
