Most software engineer positions require a bachelor's degree.

Majoring in computer science will provide the most useful background for designing and perfecting software. Most often, interviewers will ask questions focusing on data structures and algorithms, so the theoretical background provided by traditional computer science degrees best prepares you for this.

[What does a software engineer do? - CareerExplorer](#)

Software Engineering Software engineering treats the approach to developing software as a formal process much like that found in traditional engineering. Software engineers begin by analyzing user needs. They design software, deploy, test it for quality and maintain it. They instruct computer programmers how to write the code they need.

Software is quickly becoming integral part of human life as we see more and more automation and technical advancements. Just like we expect car to work all the time and can't afford to break or reboot unexpectedly, software industry needs to continue to learn better way to build software if it were to become integral part of human life.
