The two-volume set LNCS 9172 and 9173 constitutes the refereed proceedings of the Human Interface and the Management of Information thematic track, held as part of the 17th International Conference on Human-Computer Interaction, HCII 2015, held in Los Angeles, CA, USA, in August 2015, jointly with 15 other thematically similar conferences. The total of 1462 papers and 246 posters presented at the HCII 2015 conferences were carefully reviewed and selected from 4843 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a

variety of application areas. This volume contains papers addressing the following major topics: information visualization; information presentation; knowledge management; haptic, tactile and multimodal interaction; service design and management; user studies.

Have you been looking for a long time and don't feel you're any closer to a job offer than when you began months or years ago? And you don't recall it ever being this hard to land a new job? Well, nearly all job seekers today experience difficult job searches and don't always understand why. Of course, there is a number of causes for this phenomenon. The most visible one is the outsourcing of job overseas and the adoption of technology (automation, robots, computers) in the workplace. The widespread use of online job searching also causes job search difficulties. This book overcomes these problems and more. The goal of this book is get you hired quickly, even if you've been out of work for years. It will teach you a simple, divide-and-conquer method that will help you speed up your job search. This book was written for you, the

unemployed persons of the world.

*InfoWorld Is Your Job Search In Trouble*

Getting hired quickly isn't as easy as it once was. While the traditional cause of unemployment is grouped under the heading of a "bad economy," there now exists a new impediment to getting hired: online recruitment. Why has Internet job hunting or online recruitment made it so much harder to getting hired? Before the widespread use of online recruitment, employers usually received a handful of job applicants per job posting. Today, it's quite common for employers to obtain 200 applicants per job posting! With increased competition, the difficulty of getting hired increases. You can overcome the roadblocks that online recruitment places in your path to a new job. The goal of this

Based on the needs of the educational community, and the software professional, this book takes a unique approach to teaching software testing. It introduces testing concepts that are managerial, technical, and process oriented, using the Testing Maturity Model (TMM) as a guiding framework. The TMM levels and goals support a structured presentation of fundamental and advanced test-related concepts to the reader. In this context, the interrelationships between theoretical, technical, and managerial concepts become more apparent. In addition, relationships between the testing process, maturity goals, and such key players as managers, testers and client groups are introduced.

Topics and features: - Process/engineering-oriented text - Promotes the growth and value of software testing as a profession - Introduces both technical and managerial aspects of testing in a clear and precise style -

Uses the TMM framework to introduce testing concepts in a systematic, evolutionary way to facilitate understanding - Describes the role of testing tools and measurements, and how to integrate them into the testing process Graduate students and industry professionals will benefit from the book, which is designed for a graduate course in software testing, software quality assurance, or software validation and verification Moreover, the number of universities with graduate courses that cover this material will grow, given the evolution in software development as an engineering discipline and the creation of degree programs in software engineering.
