Industrial clusters in Silicon Valley, Hsinchu Park, and northern Italy, and in the vicinity of Cambridge, U.K., have captured the imagination of policymakers, researchers, city planners and business people. Where clusters take root, they can generate valuable spillovers, promote innovation, and create the critical industrial mass for sustained growth. For cities such as Kitakyushu, Japan, that are faced with the erosion of their traditional industrial base and are threatened by economic decline, creating a cluster that would

reverse the downward trends is enormously attractive. Growing Industrial Clusters in Asia offers practical guidance on the nature of clusters and the likely efficacy of measures that could help build a cluster. It draws on the experience of both established dynamic clusters and newly emerging ones that show considerable promise. The insights that result from its analysis will be of particular interest to policy makers, urban planners, business people, and researchers.

Book Description Cloud technologies have now reached a level where even the most critical business systems can run on them. For most organizations SAP is the key business system. If SAP is unavailable for any reason then potentially your business stops. Because of this, it is understandable that you will be concerned whether such a critical system can run in the public cloud. However, the days when you truly ran your IT system on-premises have long since gone. Most organizations have been getting rid of their own data centers and increasingly moving to co-location facilities. In this context the public cloud is nothing more than an additional virtual data center connected to your existing network. There are typically two main reasons why you may consider migrating SAP to Azure: You need to replace the infrastructure that is currently running SAP, or you want to
