This book makes the mathematical basis of formal methods accessible both to the student and to the professional. It is motivated in the later chapters by examples and exercises. Throughout, the premise is that mathematics is as essential to design and construction in software engineering as it is to other engineering disciplines. The exercises range from simple drills, intended to provide familiarity with concepts and notation, to advanced material. The first four chapters of the book are devoted to foundations, with an introduction to formal systems, then the propositional and predicate calculi, concluding with a chapter on theories in general. The second part of the book builds upon the foundations by covering in detail the theory of

sets, relations, functions, and sequences. The mathematical data types then presented are powerful enough to describe many aspects of software systems, and small case studies are included as examples of their use in the modelling of software: a configuration manager, a storage allocator, and a simple backing store interface. The concrete syntax of the Z notation has been adopted. The third part of the book presents two detailed case studies in the use of mathematics in software engineering. The first is the specification of the behaviour of a telephone exchange, and the second illustrates the importance of the development of a mathematical theory in gaining an understanding of a system. Both case studies stress the roles of modelling and of proof in the construction of specifications. The final part describes the algebraic approach to specification and then summarizes and compares the various formal techniques.

specialized expertise in the negotiation and development of airport property or the resources to hire consultants. ACRP Research Report 213 provides airport management, policymakers, and staff a resource for developing and leasing airport land and improvements, methodologies for determining market value and appropriate rents, and best practices for negotiating and re-evaluating current lease agreements. There are many factors that can go into the analysis, and this report reviews best practices in property development."--Foreword.

This book is meant for those people or artists, Sculptors, Painters, or Students studying human anatomy or Fine Art. As a Sculptor, Netra Khattri

has made this book with the language of Art (Sculpture), how muscles attach to the human skeleton, and from where the muscle originates and inserts with muscle function. Initially, Netra Khattri thought of human muscles as sculptures, beginning to end with skeletons, partial muscled figures, and the origin and function of muscular structures. For example, the reader can look at the skeleton to see how the bones and muscles are constructed in this process of evolution and metamorphosis. Nevertheless, there are more interesting facts in human anatomy than here. The difference between this book shows the Ecorche sculpting process is finished anatomical references rather than, other anatomy book shows drawings of muscles attach with bone and structures of human anatomy.

Fiction for Young Adults Pick In Kat Spears's hilarious and often poignant debut, high school senior Jesse Alderman, or "Sway," as he's known, could sell hell to a bishop. He also specializes in getting things people want---term papers, a date with the prom queen, fake IDs. He has few close friends and he never EVER lets emotions get in the way. For Jesse, life is simply a series of business transactions. But when Ken Foster, captain of the football team, leading candidate for homecoming king, and all-around jerk, hires Jesse to help him win the heart of the angelic Bridget Smalley, Jesse finds himself feeling all sorts of things. While following Bridget and learning the intimate details of her life, he falls

helplessly in love for the very first time. He also finds himself in an accidental friendship with Bridget's belligerent and self-pitying younger brother who has cerebral palsy. Suddenly, Jesse is visiting old folks at a nursing home in order to run into Bridget, and offering his time to help the less fortunate, all the while developing a bond with this young man who idolizes him. Could the tin man really have a heart after all? A Cyrano de Bergerac story with a modern twist, Sway is told from Jesse's point of view with unapologetic truth and biting humor, his observations about the world around him untempered by empathy or compassion---until Bridget's presence in his life forces him to confront his

quiet devastation over a life-changing event a year earlier and maybe, just maybe, feel something again.

James Currey Publishers High-stakes public examinations exert a dominant influence in most education systems. They affect both teacher and student behavior, especially at the middle and upper levels of secondary education. The content of past examinations tends to dictate what is taught and how it is taught and, more important, what is learned and how it is learned. By changing aspects of these examinations,

especially their content and format, education systems can have a strong positive impact on teacher behavior and student learning, help raise student achievement levels, and better prepare students for tertiary-level education and for employment.

Examination agencies, many of which have followed the same procedures over decades, can learn from the successes and failures of other systems. This book addresses current issues related to the development, administration, scoring, and usage of these high-stakes public examinations, identifying key issues and problems related to examinations in many emerging market economies as well as in advanced economies. The book's primary audience consists

of public examination officials on national, regional, and state examination boards, but the book should also be of interest to senior education policy makers concerned with certification and learning achievement standards, to academics and researchers interested in educational assessment, to governmental and education agencies responsible for student selection, and to professionals at development organizations. "This extremely well-written and comprehensive book offers a timely review of the diversity of public examination practices worldwide; of the tensions between examinations and learning; and of the technical expertise involved

in the creation of valid, reliable, and fair assessments. It reminds us that as "the diploma disease" takes hold with an ever-greater intensity at every stage of education worldwide, and the commercial business of testing flourishes, those concerned with educational quality and meaningful learning must be on guard to prevent the assessment tail wagging the educational dog. +? Angela W. Little, Professor Emerita, Institute of Education, University College London "This book is very well structured and written and draws on the authors' remarkable global knowledge across countries and histories. It will be a great asset both to administrators responsible for examinations and to

academics and other professionals who seek to understand the nature and impact of examinations of different types and in different settings. +? Mark Bray, UNESCO Chair Professor of Comparative Education, University of Hong Kong; and former Director, UNESCO International Institute for Educational Planning "I am sure that Public Examinations Examined, which thoroughly analyzes the practice of public examinations in different countries and makes profound and well-grounded conclusions, will arouse very great interest and will serve to further improve public examinations. +? Sundial of the Seasons
Arms & Armour
The definitive, easy to understand and breakthrough guide on how young people can take their limited first income and turn it into a small fortune by the time they turn thirty from an expert financial planner. Most people know that there are 70 million Baby Boomers in America today....but what is less known is that there are approximately 100

million people in America between the ages of 16 and 30. This generation has just entered, or will soon be entering the work force. And they have no idea how to invest, save, or handle their money. Young people today come out of school having had little or no formal education on the basics of money management. Many have large debts from student loans looming over their heads. And many feel confused and powerless when their pricey educations don't translate into high paying jobs. They feel that their \$30,000-\$40,000 salary is too meager to bother with investing, and they constantly fear that there will be "too much month left at the end of their money." Douglas R. Andrew has shown the parents of this generation a different pathway to financial freedom. Now Doug and his sons, Emron and Aaron - both of whom are in their mid-20s - show the under-30 crowd how they can break from traditional 401k investment plans and instead can find a better way by investing in real estate, budgeting effectively,

avoiding unnecessary taxes and using life insurance to create tax-free income. With the principles outlined in Millionaire by Thirty, recent graduates will be earning enough interest on their savings to meet their basic living expenses by the time they're 30. And by the time they're 35, their investments will be earning more money than they are, guaranteeing them a happy, wealthy future.

Weird But True 1: Expanded Edition
Saint James Press
Living in a world circumscribed by up-to-the-minute news and electronic tools we barely master before they are out-of-date, we attempt to shield ourselves from environmental events which threaten to overturn our constructed reality. Naturally, in such fast-paced and topsy-turvy surroundings we watch the sky and earth for signs of regularity; looking to the changing seasons for hope and rejuvenation,

and seeking out the voices of those who speak of constancy in the changes of the natural world. Hal Borland was such a voice. Every week, beginning in 1941, in the editorial pages of The New York Times he would speak of living on the land—this natural world we all try to understand. In this collection of 365 of his essays, arranged daily within the twelve months, he writes with a familiarity of the ways of the country that is at once humble and resiliently knowledgeable. In *Sundial of the Seasons* you will find page-long ruminations on such topics as "Fog" ("a unique blend of mood and weather"), "The Bumblebee" ("Bumblebees tolerate man, up to a point"), "Dandelions" ("Neither flood nor drouth seems to discourage it"),

and "Fishing" ("The fish caught are only a lesser part of the catch"), all in celebration of the everyday events of life in the country. Begin each day with the gentle wit and wisdom of the person who, for nearly four decades, wrote his "outdoor editorials" in an engaging and inimitable fashion eagerly read by thousands.

This book broadens the scope and impact of digital storytelling in higher education. It outlines how to teach, research and build communities in tertiary institutions through the particular form of audio-visual communication known

as digital storytelling by developing relationships across professions, workplaces and civil society. The book is framed within the context of 'The Four Scholarships' developed by the Carnegie Foundation for the advancement and redefining of teaching, including the scholarships of discovery, integration, application, and teaching and learning. Across four sections, this volume considers the potential of digital storytelling to improve, enhance and expand teaching, learning, research, and interactions with society. Written by an international range of academics, researchers and practitioners, from disciplines spanning medicine, anthropology, education, social work, film and media studies, rhetoric and the humanities, the book demonstrates the variety of ways in which digital storytelling offers

solutions to key
challenges within
higher education for
students, academics
and citizens. It will
be compelling reading
for students and
researchers working
in education and
sociology.
