Bridging the fields of conservation, art history, and museum curating, this volume contains the principal papers from an international symposium titled "Historical Painting Techniques, Materials, and Studio Practice" at the University of Leiden in Amsterdam, Netherlands, from June 26 to 29, 1995. The symposium—designed for art historians, conservators, conservation scientists, and museum curators worldwide—was organized by the Department of Art History at the University of Leiden and the Art History Department of the Central Research Laboratory for Objects of Art and Science in Amsterdam. Twenty-five contributors representing museums and conservation institutions throughout the world provide recent research on historical painting techniques, including wall painting and polychrome sculpture. Topics cover the latest art historical research and scientific analyses of original techniques and materials, as well as historical sources, such as medieval treatises and descriptions of painting techniques in historical literature. Chapters include the painting methods of Rembrandt and Vermeer, Dutch 17th-century landscape painting, wall paintings in English churches, Chinese paintings on paper and canvas, and Tibetan thangkas. Color plates and black-and-white photographs illustrate works from the Middle Ages to the 20th century.

In modern education approach, development in the modern science and technology is directly related with the getting a success on the science education is accepted. So, all societies should be able to develop, understand and use the technology, and each person in the society should be literate of the science in today's world. Therefore, learners of educational institutions / organizations should be grown having specific features like problem solving skills, critical thinking, creativity, independence, self confidence abilities. As a result having these skills and abilities depend on to have a learning process which have developed perfectly. In science education, instead of teacher-centered methodologies, learner centered ones should be included. This idea refers to active learning. The idea is to bring together the international group to share experiences and work together in the field of effective use of active learning applications in science education arose Life Long Learning programme Leonardo da Vinci Project. During the project, the contact person of each institution, Meryem Nur AYDEDE YALÇIN from Nigde University (Turkey), Elena Anghel from Training cons. 2005 (Romania), Giuseppe DOTI from Associazione Antares (Italy), Vida DR?SUT?, VŠ? eMundus (Lithuania), Pedro José LEIVA PADILLA, Leiva Formacion (Spain), Christos NICOLAIDES, Dekaplus Business Services LTD (Cyprus), János PALOTÁS, Foundation of Knowledge (Hungary), Oana Cristina TURTOI, Repere Association Bacau Branch (Romania), Danut? Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's

instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom.

Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

The New Shorter Oxford English Dictionary on Historical Principles: N-Z John Wiley & Sons

A volume in the Cultural Studies Series edited by Samir Dayal An innovative and entertaining look at genre, popular culture, enjoyment, and psychoanalysis. Detective fiction, a category that, broadly defined, runs the gamut from Oedipus Rex to "The Purloined Letter," continues to draw a range of fans and scholars, and to play a pivotal role in popular entertainment, contemporary literature, and psychoanalytic theory. But how do we derive pleasure from reading about or watching a detective's exploits? Is our enjoyment in the vicarious experience of genius? Or in witnessing the commission of a crime, an equally vicarious experience of violence? Resisting Arrest looks at the detective genre in its many different cultural manifestations, from popular fiction (Christie) to high literature (Eco), from art films (Antonioni) to popular television series (Monk). In each case, Rushing finds that detective stories have less to do with fulfilling our hidden desires, as psychoanalytic explanations have traditionally asserted, than with purposively thwarting them. He argues that the genre is in fact constituted principally by the promises on which it fails to deliver, including the vicarious experience of both genius (readers expecting to play Sherlock Holmes are almost always cast as Watson) and antisocial violence, so that our pleasure is based on what Slavoj Žižek has called "the endless circulation around the always-missed object." Organized around the key ideas that structure the detective genre ("Desire," "Repetition," "Violence"), Resisting Arrest offers a thoroughly new interpretation that will appeal to scholars interested in questions about genre and cinema studies, popular culture, and psychoanalysis.

A bullet dropped and a bullet fired from a gun will reach the ground at the same time. Plants get the majority of their mass from the air around them, not the soil beneath them. A smartphone is made from more elements than you. Every day, science teachers get the opportunity to blow students' minds with counter-intuitive, crazy ideas like these. But getting students to understand and remember the science that explains these observations is complex. To help, this book explores how to plan and teach science lessons so that students and teachers are thinking about the right things – that is, the scientific ideas themselves. It introduces you to 13 powerful ideas of science that have the ability to transform how young people see themselves and the world around them. Each chapter tells the story of one powerful idea and how to teach it alongside examples and non-examples from biology, chemistry and physics to show what great science teaching might look like and why. Drawing on evidence about how students learn from cognitive science and research from science education, the book takes you on a journey of how to plan and teach science lessons so students acquire scientific ideas in meaningful ways. Emphasising the important relationship between curriculum, pedagogy and the subject itself, this exciting book will help you teach in a way that captivates and motivates students, allowing them to share in the delight and wonder of the explanatory power of science.

Guiding patient behavior is as important as ever for the practicing dentist, and the behavior of pediatric patients is perhaps the most challenging to manage. Drs. Wright and Kupietzky here update Dr. Wright's classic work on managing pediatric dental patients. Behavior Management in Dentistry for Children, 2nd Edition, has been entirely rewritten and includes the latest and most effective management strategies from an international team of experts in the field. The book addresses the influence of family and parenting styles on children's behavior and the factors that determine how children behave in the dental office. Pharmacological and non-pharmacological management techniques are described in depth, as are techniques for dealing with special needs patients. Clinical scenarios are described throughout the book, with practical application of the taught principles. The final part of the book covers the dental environment—training office personnel to manage children's behavior, practical considerations for behavior guidance, and the effects of the physical dental office environment. Behavior Management in Dentistry for Children, 2nd Edition, is ideal for pediatric residents, dental students, and practicing dentists who see children on a regular basis.
