This Manual of Fertilizer Processing, which is the fifth volume of the Fertilizer Science and Technology series. Francis (Frank) T. Nielsson, the editor of the book, has over 40 years of experience in the fertilizer industry, ranging from ammonia manufacture to the extraction of uranium from phosphoric acid, but he is best known for his work with compound or "mixed" fertilizers—fertilizers that contain two or more of the primary plant nutrients: nitrogen, phosphorus, and potassium. Compound fertilizers also may contain one or more of the ten other elements that are essential to plant growth.

For twenty years this book, now in its 5th edition, has provided

information on adverse drug interactions that is unrivalled in coverage and scholarship. Adverse drug reactions, many of them ascribable to interactions with other drugs or with chemical substances in food or the environment, are thought to cause or complicate one in twenty of hospital admissions. The book is conveniently divided into two parts: Part 1 comments on drug interactions and their mechanisms, on a pharmacokinetic and pharmacodynamic level, while Part 2 consists of drug interaction tables, divided and subdivided into categories of disorders, and the drugs used in the treatment of these disorders. If safety in drugs is to improve, education of prescribers is vitally important. This book, with its up-to-date and coordinated approach, serves that purpose well. The real threat, as the authors remind us, is the ignorance of practitioners, not the drug itself. The volume is therefore an essential addition to the shelves of those responsible for the prescription of drugs, in order to prevent a potential backlash when used in combination with other drugs or chemical substances.
