Solutions Architect's Handbook Bentang Pustaka

Solution architecture is concerned with the design and definition of (information technology) solutions so they can be subsequently implemented, used, operated and supported securely and efficiently. The solution exists to operate business processes in order to achieve business objectives, meet a business need and deliver business value. Solution architecture is concerned with engaging with the originating business function looking for the solution to create a solution vision and design a solution that meet their needs, subject to a range of constraints such as cost and affordability, time to deliver and organisational standards. The solution must exist as a coherent whole. Solutions must be designed consistently across the solution landscape and make optimum use of appropriate technologies. Solution architecture must focus on creating usable and useful solutions. Solution architecture must have a standard reliable approach to business engagements and the design of solution that

emerge from them. Solution architecture must work collaboratively with other information technology functions - other architecture roles, business analysis and service management - to ensure continuity along the solution delivery journey. Effective solution architecture involves:

- Have a depth and breadth of solution delivery and technical experience to be able to identify solution design options quickly-Being able to understand the detail of the solution while maintaining a view of the wider (and higher) context of the business need for the solution and being able to explain both these views of sets of information-Being able to communicate effectively with all parties - technical and business - involved in the solution design and delivery journey, assist with decision-making, be realistic and make appropriate compromises and design choices in order to create the best solution design-Being able to apply technology appropriately and with selective innovation
- (and the desire to constantly acquire new knowledge and ways of applying technology)-Being involved in the solution delivery journey along its entire length-Being able to be the solution advocate and subject matter expert

This book is aimed at a variety of potential readers:

- Existing solution architects who want to have a more theoretical and a broader understanding of their role
- Existing or new managers of solution architecture functions who want to create a high-performing practice within their organisations and who want to articulate the benefits and value solution architect can contribute to the information technology function and the wider business and the potential it can offer to the business organisation
- Managers of information technology functions who want to understand what solution architecture is, where it fits into the wider architecture context and disciplines and solution delivery and operation and the

value it can contribute to both the information technology function and the wider business- Other information technology architects who want to understand how the architecture disciplines can work together to deliver value- Business analysts and managers of business analysis functions who want to understand how they can work more closely with the solution architecture function in order to provide the business with a better overall service- Other information technology personnel who want to move into solution architecture and who want to understand what it is- Consulting organisations and individuals who want to develop and offer value-adding solution architecture services

Enterprise Security Architecture Using IBM Tivoli Security Solutions "O'Reilly Media, Inc."

Can security automata (robots and AIs) make moral decisions to apply force on humans correctly? If they can make such decisions, ought they be used to do so? Will security automata increase or decrease aggregate risk to humans? What regulation is appropriate? Addressing these important issues this book examines the political and technical challenges of the robotic use of force. The book presents accessible practical examples of the 'machine ethics' technology likely to be installed in military and police robots and also in civilian robots with everyday security functions such as childcare. By examining how machines can pass 'reasonable person' tests to demonstrate measurable levels of moral competence and display the ability to determine the 'spirit' as well as the 'letter of the law', the author builds upon existing research to define conditions under which robotic force can and ought to be used to

enhance human security. The scope of the book is thus far broader than 'shoot to kill' decisions by autonomous weapons, and should attract readers from the fields of ethics, politics, and legal, military and international affairs. Researchers in artificial intelligence and robotics will also find it useful.

mencoba Sprint, sebuah metode untuk
memecahkan masalah dan menguji ide-
ide baru, menyelesaikan lebih banyak
hal dengan efisien. Buku ini ditulis Jake
Knapp, mantan Design Partner Google
Ventures, untuk menuntun Anda
merasakan pengalaman menerapkan

metode yang telah mendunia ini. Sprint mewujudkan pengekseskusan ide besar hanya dalam lima hari. Menuntun tim Anda dengan checklist lengkap, mulai dari Senin hingga Jumat. Menjawab segala pertanyaan penting yang sering kali hanya disimpan di benak mereka yang sedang menguji ide/konsep/produk. Sprint juga membantu Anda lebih menikmati setiap proses. Anda bisa mengamati dan bergabung dengan ratusan dari pelaku Sprint di seluruh dunia melalui tagar #sprintweek di Twitter. Sebuah proyek besar terjadi pada 2009. Seorang insinyur Gmail bernama Peter Balsiger mencetuskan ide mengenai surel yang bisa teratur secara otomatis. Saya

sangat tertarik dengan idenya—yang disebut “Kotak Masuk Prioritas”—dan merekrut insinyur lain, Annie Chen, untuk bergabung bersama kami. Annie setuju, tetapi dia hanya punya waktu sebulan untuk mengerjakannya. Kalau kami tidak bisa membuktikan bahwa ide itu bisa diterapkan dalam jangka waktu tersebut, Annie akan beralih ke proyek lainnya. Saya yakin waktunya tidak akan cukup, tetapi Annie adalah insinyur yang luar biasa. Jadi, saya memutuskan untuk menjalaninya saja. Kami membagi waktu sebulan itu ke dalam empat bagian yang masing-masing lamanya seminggu. Setiap pekan, kami menggarap desain baru. Annie dan Peter membuat purwarupa, lalu pada

akhir minggu, kami menguji desain ini bersama beberapa ratus orang lainnya. Pada akhir bulan, kami menemukan solusi yang bisa dipahami dan diinginkan orang-orang. Annie tetap menjadi pemimpin untuk tim Kotak Masuk Prioritas. Dan entah bagaimana caranya, kami berhasil menyelesaikan tugas desainnya dalam waktu yang lebih singkat dari biasanya. Beberapa bulan kemudian, saya mengunjungi Serge Lachapelle dan Mikael Drugge, dua orang karyawan Google di Stockholm. Kami bertiga ingin menguji ide perangkat lunak untuk konferensi video yang bisa dijalankan lewat peramban. Karena saya berada di kota tersebut hanya selama beberapa hari, kami bekerja secepat mungkin. Pada penghujung kunjungan saya, kami berhasil menyelesaikan purwarupanya. Kami mengirimkannya ke rekan kerja kami lewat surel dan mulai menggunakannya dalam rapat. Dalam beberapa bulan, seluruh perusahaan sudah bisa menggunakannya. (Selanjutnya, versi yang sudah dipoles dan disempurnakan dari aplikasi berbasis web tersebut dikenal sebagai Google Hangouts.) Dalam kedua kasus tersebut, saya menyadari bahwa saya bekerja jauh lebih efektif ketimbang rutinitas kerja harian saya atau ketika mengikuti lokakarya diskusi sumbang saran. Apa yang membedakannya? Saya menimbang kembali lokakarya tim

yang saya gagas sebelumnya.

Bagaimana kalau saya memasukkan elemen ajaib lainnya—fokus pada kerja individu, waktu untuk membuat purwarupa, dan tenggat yang tak bisa ditawar? Saya lalu menyebutkan, “sprint” desain. Saya membuat jadwal kasar untuk sprint pertama saya: satu hari untuk berbagi informasi dan mereka ide, diikuti dengan empat hari pembuatan purwarupa. Sekali lagi, tim Google menyambut baik eksperimen ini. Saya memimpin sprint untuk mendesain Chrome, Google Search, Gmail, dan proyek-proyek lainnya. Ini sangat menarik. Sprint ini berhasil. Ide-ide diuji, dibangun, diluncurkan, dan yang terbaik, kebanyakan dari ide-ide ini berhasil diterapkan dalam dunia nyata. Proses sprint menyebar di seisi Google dari satu tim ke tim lain, dari satu kantor ke kantor lain. Seorang desainer dari Google X tertarik dengan metode ini, jadi dia menjalankan sprint untuk sebuah tim di Google Ads. Anggota tim dalam sprint di Ads kemudian menyampaikannya kepada kolega mereka, dan begitu seterusnya. Dalam waktu singkat saya mendengar penerapan sprint dari orang-orang yang tidak saya kenal. Dalam perjalanannya, saya membuat beberapa kesalahan. Sprint pertama saya melibatkan empat puluh orang—jumlah yang sangat besar dan justru hampir menghambat sprint tersebut, bahkan sebelum dimulai. Saya

menyesuaikan waktu yang diperlukan untuk mengembangkan ide dan pembuatan purwarupa. Saya jadi memahami mana yang terlalu cepat, terlalu lambat, hingga akhirnya menemukan yang waktu paling sesuai. Beberapa tahun kemudian, saya bertemu Bill Maris untuk membicarakan sprint. Bill adalah CEO Google Ventures, perusahaan modal ventura yang didirikan Google untuk berinvestasi pada startup-startup potensial. Dia adalah salah satu orang berpengaruh di Silicon Valley. Namun, Anda tidak akan menyangkanya dari pembawaannya yang santai. Pada sore itu, dia mengenakan pakaian khasnya, yaitu topi bisbol dan kaus dengan tulisan

tentang Vermont. Bill tertarik untuk menjalankan sprint dengan startup dalam portofolio GV. Startup biasanya hanya memiliki satu kesempatan emas untuk mendesain sebuah produk yang sukses, sebelum akhirnya kehabisan dana. Sprint bisa membantu mencari tahu apakah startup-startup ini berada di jalur yang tepat sebelum akhirnya mereka bisa berkecimpung dalam tahapan yang lebih berisiko untuk membangun dan meluncurkan produk mereka. Dengan menjalankan sprint, mereka bisa mendapatkan sekaligus menghemat uang. Namun agar berhasil, saya harus menyesuaikan proses sprint ini. Saya sudah berpikir mengenai produktivitas individu dan tim selama

beberapa tahun. Namun, saya hampir tidak tahu apa-apa mengenai startup dan kebutuhan bisnis mereka. Tetap saja, antusiasme Bill meyakinkan saya bahwa Google Ventures adalah tempat yang tepat untuk menerapkan sprint—sekaligus tempat yang tepat bagi saya. “Ini misi kita,” ujarnya, “untuk bisa menemukan entrepreneur terbaik di muka bumi dan membantu mereka membuat dunia ini menjadi tempat yang lebih baik.” Saya tentu tak bisa menolaknya. Di GV, saya bergabung dengan tiga rekan lain: Braden Kowitz, John Zeratsky, dan Michael Margolis. Bersama, kami mulai menjalankan sprint dengan startup-startup, bereksperimen dengan prosesnya, dan menguji hasilnya agar bisa menemukan cara untuk memperbaikinya. Ide-ide dalam buku ini lahir dari semua anggota tim kami. Braden Kowitz memasukkan desain berbasis cerita dalam proses sprint, sebuah pendekatan tak biasa yang berfokus pada pengalaman konsumen alih-alih komponen individu atau teknologi. John Zeratsky membantu kami memulai dari akhir sehingga tiap sprint bisa membantu menjawab berbagai pertanyaan bisnis paling penting. Braden dan John memiliki pengalaman dalam bisnis dan startup, hal yang tidak saya miliki, dan mereka menyesuaikan prosesnya untuk menciptakan fokus yang lebih baik dan keputusan yang lebih cerdas di tiap

sprint. Michael Margolis mendorong kami untuk mengakhiri tiap sprint dengan pengujian di dunia nyata. Dia menjalankan riset konsumen, yang perencanaan dan pelaksanaannya bisa menghabiskan waktu berminggu-minggu, dan menemukan cara untuk mendapatkan hasil yang jelas hanya dalam sehari. Ini benar-benar sebuah keajaiban. Kami tidak perlu lagi menebak-nebak apakah solusi kami bagus atau tidak karena di akhir tiap sprint, kami mendapatkan jawabannya. Kemudian ada Daniel Burka, seorang entrepreneur yang mendirikan dua startup sebelum menjual salah satunya ke Google dan bergabung dengan GV. Saat kali pertama menjelaskan proses

sprint kepadanya, dia skeptis. Baginya, sprint terdengar seperti serangkaian proses manajemen yang rumit. Namun, dia sepakat untuk mencoba salah satunya. “Dalam sprint pertama itu, kami memangkas prosesnya dan menciptakan sesuatu yang ambisius hanya dalam sepekan. Saya benar-benar jatuh hati.” Setelah kami berhasil meyakinkannya, pengalaman langsung Daniel sebagai seorang pendiri startup dan sikapnya yang tidak menoleransi omong kosong membantu kami menyempurnakan prosesnya. Sejak sprint pertama di GV pada 2012, kami telah beradaptasi dan bereksperimen. Mulanya kami mengira pembuatan purwarupa dan riset yang cepat hanya

akan berhasil untuk produk berskala besar. Mampukah kami bergerak sama cepatnya jika konsumen kami adalah para ahli di berbagai bidang seperti kesehatan dan keuangan? Tanpa disangka, proses lima hari ini bisa bertahan. Proses ini sesuai untuk semua jenis konsumen, mulai dari investor sampai petani, dari onkolog sampai pemilik bisnis skala kecil. Juga bagi situs web, aplikasi iPhone, laporan medis, hingga perangkat keras berteknologi tinggi. Tidak hanya untuk mengembangkan produk, kami juga menggunakan sprint untuk menentukan prioritas, strategi pemasaran, bahkan menamai perusahaan. Proses ini berulang-ulang menyatukan tim dan

menjadikan ide-ide menjadi nyata. Selama beberapa tahun belakangan, tim kami mendapatkan beragam kesempatan untuk bereksperimen dan memvalidasi ide kami mengenai proses kerja. Kami menjalankan lebih dari seratus sprint bersama dengan startup-startup dalam portofolio GV. Kami bekerja bersama, sekaligus belajar dari para entrepreneur brilian seperti Anne Wojcicki (pendiri 23andMe), Ev Williams (pendiri Twitter, Blogger, dan Medium), serta Chad Hurley dan Steve Chen (pendiri YouTube). Pada awalnya, saya hanya ingin membuat hari-hari kerja saya efisien dan berkualitas. Saya ingin berfokus pada apa yang benar-benar penting dan menjadikan waktu saya

berharga—bagi saya, tim, dan konsumenhabisnya, tenggat yang molor, rapat-kami. Kini, lebih dari satu dekade kemudian, proses sprint secara konsisten telah membantu saya meraih mimpi tersebut. Dan saya sangat senang berbagi mengenai hal tersebut dengan Anda dalam buku ini. Dengan keberuntungan, Anda bisa memilih pekerjaan Anda karena visi yang tajam. Anda ingin berbagi visi tersebut kepada dunia, baik yang berupa pesan, layanan, maupun pengalaman, dengan perangkat lunak maupun keras, atau bahkan—sebagaimana dicontohkan dalam buku ini—sebuah cerita atau ide. Namun, mewujudkan visi ini tak mudah. Gampang sekali terjebak dalam berbagai hal: surel yang seolah tiada

rapat seharian yang menyita waktu Anda, dan proyek jangka panjang yang hanya berdasarkan asumsi. Prosesnya tidak harus selalu seperti ini. Sprint menawarkan jalur untuk memecahkan masalah-masalah besar, menguji ide-ide baru, menyelesaikan lebih banyak hal, dan melakukan semuanya dengan lebih cepat. Sprint juga membantu Anda lebih menikmati prosesnya. Dengan kata lain, Anda benar-benar harus mencobanya sendiri. Ayo kita mulai. —Jake Knapp San Francisco, Februari 2016 [Mizan, Bentang Pustaka, Manajemen, Ide, Kreatif, Inovasi, Motivasi, Dewasa, Indonesia] spesial seri bentang bisnis & startup

This classroom-tested textbook presents an active-learning approach to the foundational concepts of software design. These concepts are then applied to a case study, and reinforced through practice exercises, with the option to follow either a structured design or object-oriented design paradigm. The text applies an incremental and iterative software development approach, emphasizing the use of design characteristics and modeling techniques as a way to represent higher levels of design abstraction, and promoting the model-view-controller (MVC) architecture. Topics and features: provides a case study to illustrate the various concepts discussed

throughout the book, offering an in-depth look at the pros and cons of different software designs; includes discussion questions and hands-on exercises that extend the case study and apply the concepts to other problem domains; presents a review of program design fundamentals to reinforce understanding of the basic concepts; focuses on a bottom-up approach to describing software design concepts; introduces the characteristics of a good software design, emphasizing the model-view-controller as an underlying architectural principle; describes software design from both object-oriented and structured perspectives; examines additional topics on human-computer interaction design, quality assurance, secure design, design patterns, and persistent data storage design; discusses design concepts that may be applied to many types of software development projects; suggests a template for a software design document, and offers ideas

for further learning. Students of computer science and software engineering will find this textbook to be indispensable for advanced undergraduate courses on programming and software design. Prior background knowledge and experience of programming is required, but familiarity in software design is not assumed.
