This IBM® Redpaper™ publication presents the
process and steps that were taken to move from an R
language forecasting solution to an IBM SPSS®

Modeler solution. The paper identifies the key challenges that the team faced and the lessons they learned. It describes the journey from analysis through design to key actions that were taken during development to make the conversion successful. The solution approach is described in detail so that you can learn how the team broke the original R solution architecture into logical components in order to plan for the conversion project. You see key aspects of the conversion from R to IBM SPSS Modeler and how basic parts, such as data preparation, verification, pre-screening, and automating data quality checks, are accomplished. The paper consists of three chapters: Chapter 1 introduces the business background and the problem domain. Chapter 2 explains critical technical challenges that the team confronted and solved. Chapter 3 focuses on lessons that were learned during this process and ideas that might apply to your conversion project. This paper applies to various audiences: Decision makers and IT Architects who focus on the architecture, roadmap, software platform,

and total cost of ownership. Solution development team members who are involved in creating statistical/analytics-based solutions and who are familiar with R and IBM SPSS Modeler.

In the past 30 years, China has achieved an unprecedented development 'miracle' in human history. How did China achieve this? What are the key drivers for such a rapid growth? And most importantly, what can be learned from China's success? While many factors could be identified to explain China's success, it is no doubt that the numerous Special Economic Zones (SEZs) and industrial clusters that emerged after the country's reforms are two important engines that have been driving China's rapid development. The key experiences of China's SEZs and industrial clusters could be best summarized as: gradualism with experimental approach; strong commitment; and an active facilitating state with strong pragmatism. This book reviews the development experiences of

China's SEZs and industrial clusters through extensive research, field visits, and case studies in an attempt to benefit the policy-makers, development practitioners, scholars from developing countries, and the global development community in general. It contains five detailed case studies three SEZs in the broadest sense (Shenzhen, Tianjin and Kunshan) and two industrial clusters (Wenzhou footwear cluster in Zhejiang and Xiqiao textile cluster in Guangdong). This volume represents the most comprehensive volume to date on China's experiences with both its SEZ and cluster experiences.

Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network. Federal information systems integration and consolidation Springer Nature The principal aim of this book is to introduce chemists through a tutorial approach to the use of microwaves by examining several experiments of microwave chemistry and materials processing. It will subsequently enable chemists to fashion their own experiments in microwave chemistry or

materials processing. Microwave heating has become a popular methodology in introducing thermal energy in chemical reactions and material processing in laboratory-scale experiments. Several research cases where microwave heating has been used in a wide range of fields have been reported, including organic synthesis, polymers, nanomaterials, biomaterials, and ceramic sintering, among others. In most cases, microwave equipment is used as a simple heat source. Therefore the principal benefits of microwave radiation have seldom been taken advantage of. One reason is the necessity to understand the nature of electromagnetism, microwave engineering, and thermodynamics. However, it is difficult for a chemist to appreciate these in a short time, so they act as barriers for the chemist who might take an interest in

the use of microwave radiation. This book helps to overcome these barriers by using figures and diagrams instead of equations as much as possible.

The Urban Shepherd He has come a long way both literally and figuratively from his days as a poor shepherd boy in Tunisia, North Africa, but Ben Amor is a symbol of what can happen when you don't give up and chase the American Dream until it comes true. The successful career man reinvented himself again after a dream in 1983 of children crying because they were dying of starvation. Unable to forget the sound of children crying, he founded Terra-Genesis Inc., a nonprofit agency that began as a way to try to end world hunger through technology. The book tells

how a young man's vision and passion lead him to chase the American Dream in spite of many challenges and people calling him "crazy". Ben has his own experience with overcoming the odds, a journey he intimately describes in *The Urban Shepherd*. He shares his joys—and his sorrows—from humble beginnings working hard to survive in Tunisia, serving in the Tunisian Air Force, and moving to the United States to live. Through sharing his personal journey adjusting to a new culture, toxic relationships, professional and personal setbacks, and balancing school, work, and family life, Ben aims to empower

readers to chase and reach the American Dream.
