This work skeptically explores the notion that the internet will soon obviate any need for traditional print-based academic libraries. It makes a case for the library's staying power in the face of technological advancements (television, microfilm, and CD-ROM's were all once predicted as the contemporary library's heir-apparent), and devotes individual chapters to the pitfalls and prevarications of popular search engines, e-books, and the mass digitization of traditional print material.

The aim of this book is to help all professionals who work with children to recognise, to understand and, if possible, to prevent 'Munchausen Syndrome by Proxy' abuse. This headline title encompasses many different situations in which children are presented as 'sick' but where the 'illness' has arisen as a result of the parent's actions in producing a factitious illness either directly (induced illness) or by telling a story of symptoms which lead health professionals to believe the child has an illness. A practical staged approach to this problem is described. This book is a practical guide written by professionals with current experience in this field. It covers all aspects of this form of abuse from mild to life threatening presentations and is structured around case scenarios. It should be of interest to paediatricians both hospital based and community, child mental health professionals, nurses and health visitors, social workers and legal experts.

The study was led by six research questions, and six hypotheses were examined at a significance level of 0.05. The quasi-experimental design was used, notably the non-equivalent control group design for the pretest and posttest. 4,873 senior secondary school students in the Nnewi Education Zone of the state of Anambra make up the study's population. In the study, 2.73 percent of the population was used. A sample of 133 Nnewi Education Zone SS2 computer science students was used. The Computer Studies Department and one knowledgeable computer studies teacher from Nnewi. Kuder-Richardson Formula 20 was used to determine the instrument's reliability. The CSAT was used as a pretest and posttest to gather data. Three weeks following the post test, the retention test was given. The results demonstrated that a lesson followed by animated media education greatly improved students' computer science

performance. When compared to the traditional approach, only tutorials considerably increased students' retention, however, this improvement was not significant when compared to animated media. The study concluded that tutorials are successful at raising students' achievement and retention. The use of animated material in the classroom has been shown to improve student achievement.

This volume deals with the propagation of three-dimensional shock waves and their reflection from curved walls. It is divided into two parts. The first part presents a ray method. This is based on the expansion of fluid properties in power series at an arbitrary point on the shock front. Continuous fractions are used. Results for shock propagation in non-uniform fluids are given. The second part discusses the shock reflection from a concave body. The important shock-focusing problem is included. The work is supported by both numerical and experimental results. Many interesting features, such as formation of a jet, vortices and the appearance of disturbances on the shock front, are discussed. Besides shock waves in gases, the distinctive features of shock propagation through a weakly ionized plasma are considered.

"Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a

thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.
