The discovery of insulin at the University of Toronto in 1921-22 was one of the most dramatic events in the history of the treatment of disease. Insulin was a wonder-drug with ability to bring patients back from the very brink of death, and it was no surprise that in 1923 the Nobel Prize for Medicine was awarded to its discoverers, and the Canadian research

team of Banting, Best, Collip, and Macleod. In this engaging and award-winning account, historian Michael Bliss recounts the fascinating story behind the discovery of insulin - a story as much filled with fiery confrontation and intense competition as medical dedication and scientific genius. Originally published in 1982 and updated in 1996, The

Discovery of Insulin has won the City of Toronto Book Award, the Jason Hannah Medal of the Royal Society of Canada, and the William H. Welch Medal of the American Association for the History of Medicine.

The Counseling Dictionary
Springer Science & Business Media
International Security Studies (ISS) has changed and diversified in many ways since 1945. This book provides the

first intellectual history of the development of the subject in that period. It explains how ISS evolved from an initial concern with the strategic consequences of superpower rivalry and nuclear weapons, to its current diversity in which environmental, economic, human and other securities sit alongside military security, and in which approaches ranging from traditional Realist analysis to Feminism and Post-colonialism are in

play. It sets out the driving forces that shaped debates in ISS, shows what makes ISS a single conversation across its diversity, and gives an authoritative account of debates on all the main topics within ISS. This is an unparalleled survey of the literature and institutions of ISS that will be an invaluable guide for all students and scholars of ISS, whether traditionalist, 'new agenda' or critical.

Dissertation Abstracts

International Harper Collins
Few political figures of the twentieth century have aroused as much passion, controversy, and curiosity as Leon Trotsky. His role in history—his epic rise and fall, his fiery persona, his violent end in Mexico in August 1940—holds a fascination that transcends the history of the Russian Revolution. Bertrand M. Patenaude masterfully interweaves the story of Trotsky 's final years with

flashbacks to pivotal episodes in his career as a young Marxist, revolutionary hero, Red Army chief, Bolshevik leader, outcast from Stalin ' s USSR, and ultimately heretic of the Kremlin, targeted for assassination by its secret police. Gripping, tragic, and based on extensive firsthand research, Trotsky brilliantly illuminates the fateful and dramatic life of one of history ' s most captivating and important figures.

Methods Compendium

Springer Science & Business Media

Whose Keeper? is a profound and creative treatise on modernity and its challenge to social science.

Alan Wolfe argues that modern liberal democracies, such as the United States and Scandinavia, have broken with traditional sources of mortality and instead have relied upon economic and political frameworks to define their obligations to one another. Wolfe calls for

reinvigorating a sense of community and thus a sense of obligation to the larger society. This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was

originally published in 1989. Understanding Young Children's Learning through Play World Bank Publications Artificial intelligence, or AI, has become a ubiquitous part of our lives. Hardly a day goes by without hearing or reading about AI and the impacts it is having on society. Up until now, industry has led the charge in developing and implementing AI technologies to help achieve commercial goals. However, the public sector is increasingly turning to AI technologies to carry out its functions, develop and

inform policy, and deliver services to its citizens. How governments and regulators respond to technological and social developments in AI will have a large and lasting impact on our society. We need to encourage worthwhile technological innovation, but we need to do so with our eyes open. This requires us to be alert to the far-reaching effects AI can have. We all have a role to play in determining what the society in which we want to live looks like. [\[machine-web.pdf\]\(#\)
Doing Business in 2004 John Wiley & Sons
This document is a compendium of scientifically valid and accepted methods that can be used to assess sediment quality and predict ecological impacts...the intent here is to provide the most useful overall measures or predictors of ecological impacts currently in use rather than procedures that may have limited application outside of a particular regulatory framework...
parag The information provided in the compendium on the relative strengths and weaknesses of the different assessment methods can provide assistance in selecting the appropriate methods.

Consultation John Wiley & Sons
"The Value of Philosophy" is one of the most important chapters of Bertrand's Russell's magnum Opus, *The Problems of Philosophy*. As a whole, Russell focuses on problems he believes will provoke positive and constructive discussion, Russell concentrates on knowledge rather than metaphysics: If it is uncertain that external objects exist, how can we then have knowledge of them but by probability. There is no

reason to doubt the existence of external objects simply because of sense data.

Perspectives on Animal Behavior

John Wiley & Sons

Consultee-Centered Consultation is a non-hierarchical, non-prescriptive helping role relationship between a resource (consultant) and a person or group (consultee) who seeks professional help with a work problem involving a third party (client). This volume describes its history and development.

Hereditary Colorectal Cancer John Wiley & Sons

Tracing the history of the Cleveland Clinic from its start as a small not-for-profit group practice

to being the world's second largest private academic medical center, this medical history tells one of the most dramatic stories in modern medicine. Starting on the battlefield hospitals of World War I, this details how the clinic achieved medical firsts, such as the discovery of coronary angiography and the world's first successful larynx transplant, improved hospital safety, and met the challenges of the 21st century to be ranked among the top five hospitals in America. This text not only recounts the history of the clinic but presents a model for other not-for-profit organizations on how to endure and thrive.

The Case for Marriage Crown
This timely and accessible text

introduces, theorises and practically applies two important concepts which now underpin early years practice: those of 'playful learning' and 'playful pedagogies'. Pat Broadhead and Andy Burt draw upon filmed material, conversations with children, reflection, observation, and parental and staff interviews, in their longitudinal study of outdoor and indoor play environments in an early years unit. This research-based text offers extensive insights into related theories, as well drawing on

the authors' skills and knowledge as researcher and as class teacher in order to provide opportunities for personal reflection and possibilities for practical application in early years classes and settings. Discussing both indoor and outdoor environments, the text explores ideas surrounding 'open-ended play', and 'the whatever you want it to be place'. It illustrates how the themes of children's play reflect their interests, experiences, knowledge gained at home and in school,

and their cultural heritages. By showing how children become familiar and skilful within open-ended play environments, the authors illustrate how the children's co-operative skills develop over time as they become connected in communities of learners. Alongside the examples of children's playful learning, the book also considers the implications for resourcing and organising playful settings through playful pedagogies that connect with the Early Years Foundation Stage curriculum (DfES 2007)

and with the Tickell Review, ongoing as the book went to press. *Understanding Young Children's Learning through Play* uses children's perspectives on their play to illustrate how rich their personal understandings are. It also includes parental reflections on what may initially appear a risky and unusual outdoor environment, and it draws attention to the importance of conflict resolution in play in order to extend children's resilience and assertiveness. This insightful text will be of

interest to students of early years education, early years practitioners, academics and researchers.

Closer to the Machine John Wiley & Sons

Since the success in chemical induction of cancer in rabbit's ear skin by K. Yamagiwa in 1915, oncologists of the world have come to believe that they can only solve their problems by means of animal experimentation. The importance of environmental factors became more evident in 1935 when T. Yoshida and T. Sasaki introduced azodye

hepatocarcinogenesis in rats. In the domain of the gastrointestinal tract, T. Sugimura has more recently accumulated enough evidence to indicate that locally active chemical mutagens are carcinogenic. In contrast, principal approaches to colorectal tumors have been quite different: emphasis has been placed on gene identification. Long before cancer of the large bowel was recognized, importance of the roles of adenomatous coli and its familial occurrence attracted the attention of

epidemiologists and geneticists. Morphological characterization and analysis of hereditary trends of human material have already had a long history, and recently detailed analysis of genetic material has become feasible in the wake of rapid development in our knowledge of the oncoviruses, oncogenes, suppressor genes, chromosomal and DNA mapping, molecular mutation and so on. It is true that in colorectal pathology, and in no other field, these areas of research have been explored

more extensively and decisively. The identification of previously ill-defined lesions such as precancers and benign neoplasms have been improved because sequential changes can be observed in multiple samples spread over a wide area and followed up in due course.

Parenting Matters John Wiley & Sons

Verzamelde opstellen van de Engelse wijsgeer (1872-1970)

The Value of Philosophy RAND Corporation

Decades of research have demonstrated that the parent-

child dyad and the environment of the family "which includes all primary caregivers" are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents

and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale

adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Animal Dispersal John Wiley & Sons

This practical text explores contemporary case scenarios that arise in school counseling with children and adolescents. Throughout 30 chapters on a diverse range of topics, several school counseling experts analyze and discuss each

incident from a best practices perspective. Topics are organized around the CACREP Standards and incidents include a list of related supplemental readings, online resources, and suggested learning activities.

Issues explored include trauma, drug use, pregnancy, cyberbullying, suicide, gangs, parental conflicts, sexual orientation, third-culture students, student career development, and ethical and professional dilemmas.

4.1.1 Demographic

significance Confined

populations grow more rapidly than populations from which dispersal is permitted (Lidicker, 1975; Krebs, 1979; Tamarin et al., 1984), and demography in island populations where dispersal is restricted differs greatly from nearby mainland populations (Lidicker, 1973; Tamarin, 1977, 1978; Gliwicz, 1980), clearly demonstrating the demographic significance of dispersal. The prevalence of dispersal in rapidly expanding

populations is held to be the best evidence for presaturation dispersal. Because dispersal reduces the growth rate of source populations, it is generally believed that emigration is not balanced by immigration, and that mortality of emigrants occurs as a result of movement into a 'sink' of unfavourable habitat. If such dispersal is age- or sex-biased, the demography of the population is markedly affected, as a consequence of differences in mortality in the dispersive sex or age class. Habitat heterogeneity

consequently underlies this interpretation of dispersal and its demographic consequences, although the spatial variability of environments is rarely assessed in dispersal studies. Diet and Health Cambridge University Press Monthly magazine devoted to topics of general scientific interest. The Counselor and the Law National Academies Press This distinctive text provides master 's- and doctoral-level students, as well as new professionals, with a thorough

exploration of the range of responsibilities, working conditions, roles, evaluation criteria, benefits, and challenges experienced by counselor educators. Each chapter focuses on a key aspect of the field, including teaching; supervision; mentoring; gatekeeping; research and grant writing; tenure; adjunct, part-time, and nontenured positions; program administration; leadership; and collegiality and wellness. Case vignettes and personal narratives from counselor educators are

engaging and informative, and literature reviews are useful for introducing students to the material covered. *Requests for digital versions from ACA can be found on www.wiley.com. *To request print copies, please visit the ACA website here.

*Reproduction requests for material from books published by ACA should be directed to permissions@counseling.org Counselor Education in the 21st Century Univ of California Press
Useful as a supplemental text in advanced theories and

practicum courses, this fourth edition discusses the key concepts and techniques from many contemporary theories and how to develop an integrative approach to the counseling process to better meet individual client needs. Dr. Corey introduces the techniques that he draws from in his own integrative approach to counseling using a wide variety of case examples with diverse clients. Topics covered include assessing presenting issues; developing a productive working alliance; establishing therapeutic goals;

understanding and addressing diversity; working with resistant clients; using evidence-based practice in cognitive, emotive, and behavioral work with clients; dealing with transference and countertransference; and incorporating trends in integrative therapies. To encourage active learning, reflective exercises throughout the text provide readers with opportunities to put themselves in the role of therapist and client. "No one knows more about theory-based counseling than Gerald

Corey, who has spent the past 50+ years helping us to gain real insight into multiple models. In this book, Corey takes readers from forming a working alliance with clients through the processes for setting and achieving goals. His skill at and understanding of the termination processes is worth the entire book. Not only will *The Art of Integrative Counseling* be the core text for counseling process and skills courses, it will provide the foundation for effective, truly integrated counseling throughout one's career."

—James Robert Bitter, EdD, East Tennessee State University "Gerald Corey's fourth edition of *The Art of Integrative Counseling* provides important concepts to consider when developing an integrative approach to working with clients. For beginning counselors, it demonstrates how one can be integrative whether one is behaviorally, cognitively, or affectively oriented. For more advanced counselors, it reminds them of the wealth of information that all theories offer and how techniques or

theories can be synthesized into a more effective approach. Whether you are a new counselor trying to figure out how to integrate the many theories you learned about, or a seasoned professional seeking new ways of working with clients, this book has something for you." —Edward Neukrug, EdD, Old Dominion University
