Based on long-term ethnographic research, the book chapters explore the intersection of 'gender' and 'modernity' as they are mediated in the lives and subjectivities of diverse individuals and groups. How are the messages of modernity/tradition gendered? How are the material practices and cultural meanings of modernity shaped by local ideas of gender and 'progress'? Together these chapters demonstrate that the ideas of progress, rationality, order, and development encompassed by 'modernity' are profoundly gendered, whether conveyed by mass media images of consumption, agendas of nation-building, or legal discourse.

Furthermore, the mutual inflections of gender and modernity are at once pervasively 'global,' occurring in different locales and ways; and deeply 'local,' shaping and shaped by the structures and experiences of culture, class, ethnicity, and nation.

This diverse, global, and interdisciplinary volume explores the existing research, practice, and ethical issues pertinent to the field of human-animal interactions (HAIs), interventions, and anthrozoology, focusing on the perceived physical and mental health benefits to humans and the challenges derived from these relationships. The book begins by exploring the basic theoretical principles of anthrozoology and HAI, such as the evolution and history of the field, the importance of language, the economic costs and current perspectives to physical and mental wellbeing, the origins of domestication of animals, anthropomorphism, and how animals fit into human societies. Chapters then move onto practice, covering topics such as how animals help childhood and adulthood development, pet ownership, disability, the roles of pets for people with psychiatric disorders, the links between animal and domestic abuse, and then more widely

into the therapeutic roles of animals, animal-assisted therapies, interactions outside the home, working animals, animals in popular culture, and animals in research, for leisure, and food. Including chapters on a wide range of animals, from domesticated pets to wildlife, this collection examines the benefits yet also reveals the complexity, and often dark side, of human-animal relations. Interweaving accessible commentaries with revealing chapters throughout the text, this collection would be of great interest to students and practitioners in the fields of mental health, psychology, veterinary medicine, zoology, biology, social work, history, and sociology.

Chemistry and Technology of Plant Substances: Chemical and Biochemical Aspects demonstrates the progress and promise of developing new chemical substances from renewable sources of chemical raw materials. The volume brings

together new achievements in the field of research and processing of plant raw materials and the synthesis of natural compounds for the production of biologically active substances and drugs. The volume looks closely at the rational use of renewable raw materials, which is the source of new compounds and intermediates for the chemical industry. It covers a wide range of problems associated with the use of the components of plants to produce new substances with a wide variety of purposes. According to the latest estimates, plants form about a million chemical substances. In some cases, plant products have pharmacological or biological activity that can be of therapeutic benefit in treating diseases. In addition, due to the structural diversity of plant material, chemical synthesis is easily reachable. Synthetic analogs of natural products with improved potency and safety can be prepared by chemical synthesis. Such synthetic analogs are safer for humans. Plant materials are often used as starting points for drug discovery. Chemistry and Technology of Plant Substances: Chemical and Biochemical Aspects presents the

theoretical trends and recent practical achievements on complex processing of plant-based raw materials. Low molecular weight components, isolated from plant material, are widely used in fine organic synthesis. High molecular weight polysaccharides of conifers and other greens, such as pectin and hemicellulose, are the basis for the creation of anticoagulants and other drugs. The range of research papers presented in the book is quite wide: from fundamental and applied problems of wood chemistry and organic synthesis to biological activity of natural compounds. The book provides valuable information for those skilled in organic chemistry, chemical engineers, researchers and scientists as well as for faculty and upper-level students. This volume, *Chemistry and Technology of Plant Substances: Chemical and Biochemical Aspects*, was created on the initiative of Emanuel Institute of Biochemical Physics of the Russian Academy of Sciences (Moscow) and the Institute of Chemistry of Komi Scientific Center of Ural Branch of the Russian Academy of Sciences (Syktyvkar). Knowledge systems are an essential aspect to the preservation of a community 's culture. In developing countries, this community-based knowledge has significant influence on such things as decision making and problem solving. The Handbook of Research on Social, Cultural, and Educational Considerations of Indigenous Knowledge in Developing Countries is an authoritative reference source

for the latest scholarly research on the importance of knowledge and value systems at the community level and ways indigenous people utilize this information. Highlighting impacts on culture and education in developing nations, this book is ideally designed for researchers, academicians, policy makers, students, and professionals interested in contemporary debates on indigenous knowledge systems.

Proceedings of a Conference Held ... Frontiers Media SA

Global interest in indigenous studies has been rapidly growing as researchers realize the importance of understanding the impact indigenous communities can have on the economy, development, education, and more. As the use, acceptance, and popularity of indigenous knowledge increases, it is crucial to explore how this community-based knowledge provides deeper insights, understanding, and influence on such things as decision making and problem solving. Indigenous Studies: Breakthroughs in Research and Practice examines the politics, culture, language, history, socio-economic development, methodologies, and contemporary experiences of indigenous peoples from around the world, as well as how contemporary issues impact these indigenous communities on a local,

national, and global scale. Highlighting a range of topics such as local narratives, intergenerational cultural transfer, and ethnicity and identity, this publication is an ideal reference source for sociologists, policymakers, anthropologists, instructors, researchers, academicians, and graduate-level students in a variety of fields.

Sustainable food production and ethics
Food is a means of life. The way it is produced affects us all. Largely unnoticed by the public, a system of the agricultural and food industry has developed in recent decades that supplies us with an abundance of food at excessively low prices. However, the undesirable side effects and external costs of this system have long been ignored. Enormous environmental and climate impacts, loss of biodiversity, animal welfare problems and the continuing death of farms only inadequately describe the true extent of the harmful effects. In the interests of the public welfare, these can no longer be tolerated. However, the complexity of the issues and the diversity of vested interests stand in the way of simple solutions. This professional book provides a comprehensive systemic analysis from very different perspectives and explains how this development has come about. It shows what fundamental changes are needed in all areas in order to find a way out of the destructive pursuit of cost minimisation through evidence-based quality production. Professionals in the agricultural and food industry and the scientific disciplines

involved, including veterinary medicine, as well as decision-makers in political institutions, professional associations and NGOs can use this knowledge to redesign the food sector for the future.

Proceedings of the Conferences, Agricultural Economics Society

"Sustainability has become an issue widely debated in many countries. Given the central role of food supply and the emotional relationship that modern mankind still has to its food, sustainability is seen as a value which has to be maintained throughout food supply chains. The complexity of modern food systems invokes a variety of ethical implications which emerge from contrasts between

ideals, perceptions and the conditions of technical processes within food systems, and the concerns connected to this. This book covers a broad range of aspects within the general issue of sustainable food production and ethics. Linking different academic disciplines, topics range from reflections about the roots of sustainability and the development of concepts and approaches to globalisation and resilience of food systems as well as specific ethical aspects of organic farming and animal welfare. Modern technologies which are intensely advocated by certain stakeholder groups and their societal challenges are addressed, as are many other specific cases of food production and processing, consumer perception and marketing." **Computer and Computing Technologies in Agriculture II, Volume 3**
