Every four minutes, over 50 children under the age of five die.

In the same four minutes, 2 mothers lose their lives in childbirth. Every year, malaria kills nearly 1.2 million people, despite the fact that it can be prevented with a mosquito net and treated for less than \$1.50. Sadly, this list goes on and on. Millions are dying from diseases that we can easily and inexpensively prevent, diagnose, and treat. Why? Because even though we know exactly what

people need, we just can't get it to them. They are dying not because we can't solve a medical problem but because we can't solve a logistics problem. In this profoundly important book, Eric G. Bing and Marc J. Epstein lay out a solution: a new kind of bottom-up health care that is delivered at the source. We need microclinics, micropharmacies, and microentrepreneurs located in the remote, hard-to-reach communities they serve. By building a new model that "scales down" to train and incentivize all kinds of health-care providers in their own villages and towns, we can create an army of on-site professionals who can prevent tragedy at a fraction of the cost of

top-down bureaucratic programs. Bing and Epstein have seen the model work, and they provide example after example of the extraordinary results it has achieved in Africa, Asia, and Latin America. This is a book about taking health care the last mile—sometimes literally—to prevent widespread, unnecessary, and easily avoided death and suffering. Pharmacy on a Bicycle shows how the same forces of innovation and entrepreneurship that work in first-world business cultures can be unleashed to save the lives of millions.

Artificial intelligence (AI) has grown in presence in asset management and has revolutionized the sector in many ways. It has improved portfolio management, trading, and risk management practices by increasing efficiency, accuracy, and compliance. In particular, AI techniques help construct portfolios based on more accurate risk and return forecasts and more complex constraints. Trading algorithms

use AI to devise novel trading signals and execute trades with lower transaction costs. AI also improves risk modeling and forecasting by generating insights from new data sources. Finally, robo-advisors owe a large part of their success to AI techniques. Yet the use of AI can also create new risks and challenges, such as those resulting from model opacity, complexity, and reliance on data integrity.
