Explain. Solution: Since the flow is steady, the fluid acceleration along the half-body surface is. convective, $dU/dt = U (dU/ds)$, where s is along the surface. (a) At the point of. maximum velocity in Fig. 8.6, $dU/ds = 0$, hence $dU/dt = 0$, so answer (a) is No. (b) A.

About this book. About this book. This complementary text provides detailed solutions for the problems that appear in Chapters 2 to 18 of Computational Techniques for Fluid Dynamics (CTFD), Second Edition. Consequently there is no Chapter 1 in this solutions manual. The solutions are indicated in enough detail for the serious reader to have little difficulty in completing any intermediate steps.

Computational fluid dynamics (CFD) is the use of applied mathematics, physics and computational software to visualize how a gas or liquid flows — as well as how the gas or liquid affects objects as it flows past. Computational fluid dynamics is based on the Navier-Stokes equations. These equations describe how the velocity, pressure, temperature, and density of a moving fluid are related.
