Proven Material for a Course on the Introduction to the Theory and/or on the Applications of Classical Nonparametric Methods Since its first publication in 1971, Nonparametric Statistical Inference has been widely regarded as the source for learning about nonparametric statistics. The fifth edition carries on this tradition while thoroughly revising at least 50 percent of the material. New to the Fifth Edition Updated and revised contents based on recent journal articles in the literature A new section in the chapter on goodness-of-fit tests A new chapter that offers practical guidance on how to choose among the various nonparametric procedures covered Additional problems and examples Improved computer figures This classic, best-selling statistics book continues to cover the most commonly used nonparametric procedures. The authors carefully state the assumptions, develop the theory behind the procedures, and illustrate the techniques using realistic research examples from the social, behavioral, and life sciences. For most procedures, they present the tests of hypotheses, confidence interval estimation, sample size determination, power, and comparisons of other relevant procedures. The text also gives examples of computer applications based on Minitab, SAS, and StatXact and

compares these examples with corresponding hand calculations. The appendix includes a collection of tables required for solving the data-oriented problems. *Nonparametric Statistical Inference, Fifth Edition* provides in-depth yet accessible coverage of the theory and methods of nonparametric statistical inference procedures. It takes a practical approach that draws on scores of examples and problems and minimizes the theorem-proof format. With contributions from leading brand experts around the world, this valuable resource delineates the case for brands (financial value, social value, etc.) and looks at what makes certain brands great. It covers best practices in branding and also looks at the future of brands in the age

of globalization. Although the balance sheet may not even put a value on it, a company's brand or its portfolio of brands is its most valuable asset. For well-known companies it has been calculated that the brand can account for as much as 80 percent of their market value. This book argues that because of this and because of the power of not-for-profit brands like the Red Cross or Oxfam, all organisations should make the brand their central organising principle, guiding every decision and every action. As well as making the case for brands and examining the argument of the anti-globalisation movement that brands are bullies which do harm, this second edition of Brands and Branding provides an expert review of best practice in branding, covering everything from brand positioning to brand protection, visual and verbal identity and brand communications. Lastly, the third part of the book looks at trends in branding, branding in Asia, especially in China and India, brands in a digital world and the future for brands. Written by 19 experts in the field, Brands and Branding sets out to provide a better understanding of the role and importance of brands, as well as a wealth of insights into how one builds and sustains a successful brand.

With the growing integration of the international economy the international differences in financial reporting practices have never been so important in multinational business. Recent reforms in International Accounting Standards, combined with the continuing European harmonization, have placed this topic high on the current agenda of both researchers and of business analysts actively concerned with international accounting practice. This new, updated edition of Christopher Nobes' International Classification of Financial Reporting examines the causes and

nature of the differences between financial reporting practices in different countries, charting all the many significant developments to have taken place through the 1980s. The relevant research published during this period is discussed, alongside the effects of the regulatory changes that have taken place. Improvements in the existing system of classification in financial reporting are proposed in the light of the accelerated process of harmonization currently taking place. The resulting volume is an indispensable source for academics and professionals in international accounting and for all who are engaged in the process of European harmonization.

Beautifully written and class tested, *Exploring Mass Media for a Changing World* provides a comprehensive but modestly priced text around which instructors can develop a customized teaching package. Written for introductory courses, it covers essential information students need in order to understand the media, the mass communication process, and the role of media in society. It summarizes basic, generally agreed-upon principles, theories, significant historical events, and essential facts, but does so in a tightly written, readable style. Taken together, this information can be thought of as a minimum repertoire that all citizens of the "information age" need in order to become literate consumers and users of mass communication. Features include:

- *Historical Framework--For ease of comprehension, media processes and individual media are placed in historical context to show their technological evolution and the effects of those changes on society.
- *Organization--The first seven chapters deal with the evolution of communication theories and processes common to all media. The next five deal with specific media in the chronological order in which they became mass media. Chapters 13 and 14 introduce two non-media institutions (advertising and public relations) whose exploration is essential in order to understand how mass media functions in our society. Finally, chapter 15 returns to the theme of technological evolution and its effects on society with an in-depth discussion of the internet.
- *Flexibility--Because it is concise, affordable, and comprehensive, it can be used either as a stand-alone text in mass media courses or as part of an instructional package in courses where mass communication is one of several major units.
- *Themes--The following themes are introduced early and carried throughout: (a) the evolution of media technology and its effects on society, (b) the global and culture-bound characteristics of mass media, and (c) the need for media literacy in the 21st century.
- *Supplements--An accompanying

instructor's manual begins with a chapter-length essay on teaching the mass media course then offers the following items for each chapter: topical outline and key vocabulary; key ideas to be emphasized and pitfalls to be avoided; discussion questions; objective and essay test items; and both print and nonprint resources for further study.
