A.M. Chiesi, in International Encyclopedia of the Social & Behavioral Sciences, 2001. Network analysis (NA) is a set of integrated techniques to depict relations among actors and to analyze the social structures that emerge from the recurrence of these relations. The basic assumption is that better explanations of social phenomena are yielded by analysis of the relations among entities.

Network analyzer receivers contain analog-to-digital converters (ADC) that convert incoming signals into a digital format. These signals can then be analyzed and displayed. The ADC cannot convert signals at radio frequencies, so incident signals must be down-converted to the ADC's operating frequency.
