There are some sets that do not contain any element at all. For example, the set of months with 32 days. We

call a set with no elements the null or empty set. It is represented by the symbol $\{ \}$ or \emptyset .

A solution set is the set of values which satisfy a given inequality. It means, each and every value in the solution set will satisfy the inequality and no

other value will satisfy the inequality. Example: Solve $2x + 3 \geq 7$, where x is a natural number. Solution: $2x + 3 \geq 7$. Subtracting 3 from both the sides, $2x \geq 4$. Dividing both sides by 2, $x \geq 2$

Solution Sets for Equations

The set containing all the solutions of an equation is called the solution set for that equation. If an equation has no solutions, we write \emptyset for the solution set. \emptyset means the null set (or empty set). Solution set The solution set for the equations $x - y = -1$ and $3x + y = 9$ is the single point $(2, 3)$.

what does the solution set being empty mean ? | Yahoo Answers

The empty set is a set with no elements. We can use braces to show the empty set: $\{ \}$. Alternatively, this symbol, \emptyset , is often used to show the empty set. As the picture shows, the two symbols mean...

Solution Set Is Empty

And so, there cannot be any solution. Therefore, the solution set is empty. The third option given says that 'empty set' is

the solution. Unless we accept this choice as ill-built sentence, this...

Solution Sets - Varsity Tutors

The set containing all the solutions of an equation is called the solution set for that equation. If an equation has no solutions, we write \emptyset for the solution set. \emptyset means the null set (or empty set). Sometimes, you may be given a replacement set, and asked to test whether the equation is true for all values in the replacement set. Example 1:

Algebra - Solutions and Solution Sets

The intersection of any set with the empty set is the empty set. This is because there are no elements in the empty set, and so the two sets

have no elements in common. In symbols, we write $X \cap \emptyset = \emptyset$. The union of any set with the empty set is the set we started with.

[Solution Set Is Empty - engineeringstudymaterial.net](http://engineeringstudymaterial.net)

In solution set notation we say that the solution set is empty and denote it with the symbol \emptyset . This symbol is often called the empty set. We now need to make a couple of final comments before leaving this section. In the above discussion of empty sets we assumed that we were only looking for real solutions.

empty set ...

A linear system with a unique solution has a solution set with one element. A linear system with no solution has a solution set that is empty. In these cases the solution set is easy to describe. Solution sets are a challenge to describe only when they contain many elements.

*** Solution set (Mathematics) - Definition - Online ...**

There may be solutions to equations and

inequalities. However, if a particular equation or inequality has no solution, then we say the solution to the EQUATION or INEQUALITY is the empty set. Look at the last item in the list, and see that you cannot simultaneously satisfy $x + 1 < y$ and $x > y$.

An equation is called _____ if its solution set is ...

For Exercise, graph the solution set. If there is no solution, indicate that the solution set is the empty set. (See Examples 5–6)

What Is the Empty Set in Set Theory? - ThoughtCo

Empty Set A set which does not contain any element is called an empty

set or void set or null set. It is denoted by $\{ \}$ or \emptyset . A set of apples in the basket of grapes is an example of an empty set. Because in grapes basket there are no apples present. Singleton Set A set which contains a single element is called a singleton set.

What is an empty set? How do you find the solution of an ...

An empty set is a set with no elements. It's empty; like an empty box. Why is this equation an empty set?

$?(6x+4) + 15 = 7$. The equation is not an empty set; its solution set is empty because there are no real solutions. $?(6x+4) = -15 + 7 < 0$. Since the real value of a square root is positive and this problem tries for a negative value, there is no real solution and the solution set is empty.
