This book chronicles the proceedings of the Symposium on Acid-Base Interactions: Relevance to Adhesion Science and Technology held on the occasion of the 75th birthday of Professor Frederick M. Fowkes as a part of the 64th Colloid and Surface Science Symposium held at Lehigh University, June 18--20, 1990. The book contains 22 papers which are divided into three sections. Topics covered include: Acid-base concepts: historical account, current status, and prospects for the future; quantum-mechanical approach to understanding acid-base interactions at metal-polymer interfaces; assessment of acidbase interactions at solid-liquid interfaces; quantitative characterization of the acid-base properties of solvents, polymers and inorganic surfaces (overview by Professor Fowkes); acid-base characteristics of a variety of solid materials (clay minerals, carbon

fibers, glass fibers, silicas, metals, polymers); acid-base interactions in wetting; applications of acid-base interactions in a variety of situations, e.g. in the adhesion of polymers to metallic and ceramic substrates, mechanical properties of wood, properties of filled polymers, and behavior of fiber-reinforced polymer composites.

Touted as the most successful NSF-funded project published, Chemistry in the Community (ChemCom) by the American Chemical Society (ACS) offers a meaningful and memorable chemistry program for all levels of high school students. ChemCom covers traditional chemistry topics within the context of societal issues and real-world scenarios. Centered on decision-making activities where students are responsible for generating data in an investigating, analyzing that data and then applying their chemistry knowledge to solve the presented problem. The text is intensively laboratory-based, with all 39 of the investigations integrated within the text, not separate from the reading. With the ChemCom program, students learn more organic and biochemistry, more environmental and industrial chemistry, and more on the particulate nature of matter than other textbooks all within the relevance of solving problems that arise in everyday life. Meticulously updated to meet the needs of today's teachers and students, the new sixth edition of ChemCom adheres to the new science framework as well as the forthcoming next generation of science standards. Incorporating advances in learning and cognitive sciences, ChemCom's wide-ranging coverage builds upon the concepts and principles found in the National Science Education Standards. Correlations are available showing how closely aligned ChemCom is to these and other state standards

CHEMICAL SOLUTIONS- Reagents Useful to the Chemist, Biologist, and Bacteriologist by FRANK WELCHER. PREFACE: Every practicing chemist and teacher of chemistry is constantly required to prepare special solutions and reagents of all kinds as a fundamental part of his work. These solutions, which include indicators, standard acids and bases, solutions of salts, special test reagents, stains, fixatives, culture media, etc., are among the basic materials which are essential to all laboratory work. The directions for preparing these solutions are not always conveniently available, and are usually found only in a reasonably complete chemical library. Since most laboratories do not

have adequate library facilities, a book of formulas for the more commonly used solutions is an extremely useful addition to the laboratory shelf. The purpose of this book is simply to collect in one place for convenient reference the methods for preparing those solutions most frequently required by the chemist. In order to increase its usefulness, however, much additional information has been included for each of the solutions to supplement the preparative methods. This includes (a) the uses of each solution; (b) the procedure for use of each in all cases where this is practicable; (c) a list of those substances which interfere in making special tests; (d) the sensitiveness of test reagents; and (e) general remarks regarding the keeping qualities, methods of storage, etc., of the various reagents. In addition to this practical information, one or more references has been included for each solution in all cases where a useful citation is available. The purpose of this list is intended to be purely utilitarian rather than historically complete, and so in many cases no reference to the original publication is included. Rather, an effort has been made to refer where possible only to standard and easily available books and periodicals, preferably in the English language. The subject matter has been selected from the literature covering all phases of chemical laboratory work, and is designed to serve chemists engaged in all branches of their profession. The solutions are listed in alphabetical order under the name by which they are best known. When a reagent is known by more than one name, the various names are included in their proper place in the alphabetical tabulation with proper cross-reference. An index of the reagents, which are classified according to their uses, is provided to assist the chemist in locating solutions whose functions are known, but which are not listed by the name known to him. This index is also of value in suggesting reagents for various tests with which the chemist is not familiar, or for which known reagents are not suitable.
