and then the task of identifying the appropriate algorithm design techniques, based on the structure of the problem. These two components interact: the more comfortable one is with the full array of possible design techniques, ... not just provide solutions to well-posed problems; they form the language that ...

We could modify the Merge Sort algorithm to count the number of inversions in the array. The key point is that if we find $L[i]$

$> R[j]$, then each element of $L[i::]$ (represent the subarray from $L[i]$) would be as an inversion with $R[j]$, since array L is sorted. COUNTING-INVERSIONS and INTER-INVERSIONS shows the pseudocode of this algorithm.
