However impressive the economic success of Penang has been over the past four decades, structural conditions in the region call for a fundamental reconfiguration of this Malaysian state ' s competitive advantage. In the 1970s, the ageing entrep ô t transformed itself into a manufacturing hub for the electronics industry and a well-known tourist site. This outward-looking model of economic growth has underpinned Penang ' s economic development up until the present. The question that now arises is whether Penang ' s present mode of development will continue to be effective, or whether it will have to transform itself. First, Malaysia in general, and Penang in particular are caught in a middle-income trap. Second, while the evolving weight of the global economy is shifting towards Asia, many of its emerging powers are competing with Penang in areas where it formerly excelled. Third, Penang is a state within a federation, and its capital, George Town, is a secondary city. Neither can rival Kuala Lumpur in terms of size or facilities, and thus must offer investors other attributes. Effectively meeting these challenges while retaining Penang ' s vibrant and living culture are the key issues that are dealt with in this second volume of the Penang Studies Series. Our economy and future way of life depend on how well American manufacturing managers adapt to the dynamic, globally competitive landscape and evolve their firms to keep pace. A major challenge is how to structure the firms environment so that it attains the speed and low cost of high-volume flow lines while retaining the flexibility and customization potential of a low-volume job shop. The books three parts are organized according to three categories of skills required by managers and engineers: basics, intuition, and synthesis. Part I reviews traditional operations management techniques and identifies the necessary components of the science of manufacturing. Part II presents the core concepts of the book, beginning with the structure of the science of manufacturing and a discussion of the systems approach to problem solving. Other topics include behavioral tendencies of manufacturing plants, push and pull production systems, the human element in operations management, and the relationship between quality and operations. Chapter conclusions include main points and observations framed as manufacturing laws. In Part III, the lessons of Part I and the laws of Part II are applied to address specific manufacturing management issues in detail. The authors compare and contrast common problems, including shop floor control, long-range aggregate planning, workforce planning and capacity management. A main focus in Part III is to help readers visualize how general concepts in Part II can be applied to specific problems. Written for both engineering and management students, the authors demonstrate the effectiveness of a rule-based and data driven approach to operations planning and control. They advance an organized framework from which to evaluate management practices and develop useful intuition about manufacturing systems.

Plunkett's Almanac of Middle Market Companies: Middle Market Research, Statistics & Leading Companies

Franklin, Jack, Marla, Thadius, and Caitlin... this unlikely group of assorted misfits are the Cemeterians, a group that will take on any job - no, really, we mean any bloody job (money's a bit tight right now)! Trudge through disgusting sewers to battle manatee-massacring mermaids and soggy cultists, creep through creepy, fog-littered cemeteries straight out of an ancient Hammer Film soundstage, confront undead lecherous lodgers and other assorted beasties, creepies, and ghoulies. It all comes down to whether an adolescent giant Automaton, a truly mad, Mad Scientist, a surly Necromancer, a Banshee's granddaughter, and a reluctant furry monster straight from under your little sister's bed can manage not to kill each other - or, at least, quit fighting over the tele-privilege-schedule long enough to get the job done! Not likely.
