## **Solutions, Minerals, and Equilibria - Robert Minard ...**

sulted in the final version, Solutions, Minerals, and Equilibria, about twice as long, in 1965. The original edition was published by Harper; Harper was taken over by Harper & Row, which permitted the book to go out of print. Fortunately, W.H. Freeman, Cooper & Company re-printed the

book, 1 and since 1975, it has been selling successfully.

The observed changes in the electrokinetic properties of calcite and apatite can be examined on the basis of the mineral-solution chemical equilibria involving dissolved mineral species. From studies of solubility isotherms for apatite

and calcite at 25°C (Fig. 3.4, Fig. 3.5), the singular point for these minerals is identified to be 9.3. Above this pH calcite is more stable than apatite.

3. SOLUTION-MINERAL EQUILIBRIA  
PART 1: CARBONATES. Carbonic acid and the carbonate minerals provide another good illustration of the use of equilibrium reasoning in geochemistry. Interactions among these compounds determine the conditions under which limestones and dolomites are formed or dissolved, and likewise the conditions of formation of carbonate minerals as cements in soils and sandstones and as vein fillings.
