With the same insight and authority that made their book *The Unix Programming Environment* a classic, Brian Kernighan and Rob Pike have written *The Practice of Programming* to help make individual programmers more effective and productive. The practice of programming is more than just writing code. Programmers must also assess tradeoffs, choose among design alternatives, debug and test, improve performance, and maintain software written by themselves and others. At the same time, they must be concerned with issues like compatibility, robustness, and reliability, while meeting specifications. *The Practice of Programming* covers all these topics, and more. This book is full of practical advice and real-world examples in C, C++, Java, and a variety of special-purpose languages. It includes chapters on: debugging: finding bugs quickly and methodically testing: guaranteeing that software works correctly and reliably performance: making programs faster and more compact portability: ensuring that programs run everywhere without change design: balancing goals and constraints to decide which algorithms and data structures are best interfaces: using abstraction and information hiding to control the interactions between components style: writing code that works well and is a pleasure to read notation: choosing languages and tools that let the machine do more of the work Kernighan and Pike have distilled years of experience writing programs, teaching, and working with other programmers to create this book. Anyone who writes software will profit from the principles and guidance in *The Practice of Programming*.

The design and analysis of efficient data structures has long been recognized as a key component of the Computer Science curriculum. Goodrich, Tomassia and Goldwasser's approach to this classic topic is based on the object-oriented paradigm as the framework of choice for the design of data structures. For each ADT presented in the text, the authors provide an associated Java interface. Concrete data structures realizing the ADTs are provided as Java classes implementing the interfaces. The Java code implementing fundamental data structures in this book is organized in a single Java package, net.datastructures. This package forms a coherent library of data structures and algorithms in Java specifically designed for educational purposes in a way that is complimentary with the Java Collections Framework.

About the book The book is compiled to complement either of the two books, Program Practically with Java (Eclipse IDE Version) or Program Practically with Java (IntelliJ IDEA Version). The book consists of 100 exercises and accompanying suggested solutions which follow at the end of the 100 exercises. The aim is to help you reinforce your Java programming skills and is part of the 'Build your programming muscle series' by the same author which currently includes the books: PROGRAM PRACTICALLY WITH - JAVA (Eclipse IDE Version) PROGRAM PRACTICALLY WITH - JAVA (IntelliJ IDEA IDE Version) PROGRAM PRACTICALLY WITH - JAVA (Scenarios and Solutions) The 100 exercises are split into 10 Labs each with 10 exercises and further details of two approaches to using the book labs and exercises is given within the next page. The book exercises are aimed at giving you hands on practical programming experience which is essential if you wish to get the best understanding of the Java language. Hands on experience whilst reading this book is the key to success. Remember "Life begins at the edge of our comfort zone" Think about now and believe. Often the thought of getting started can make us 'frightened' and 'uncomfortable'. Programming can be rewarding and completing the exercises will enhance your programming skills and how to debug code, as you fix the errors that will inevitably arise. As you complete the labs and exercises think about learning as a dot. When you start the exercises your Java learning dot is small but as you progress with the exercises, the dot will increase in size. It is not how big the dot becomes that is important but simply that the dot is increasing. No matter how 'expert' someone is at Java there will always be an opportunity to learn more and as such the dot continually gets larger.
