Imperial Russian Foreign Policy aims to demythologise a field hitherto dominated by suspicions of diabolical cunning, inscrutable motives, and international plots using unseen forces of the gigantic, fear-inspiring empire of the tsar. The contributors, leading historians from both Russia and the West, examine Imperial foreign policy from its origins to the October Revolution, revealing a policy that, as in other countries, had a complex of motives - commerce, nationalism, the interests of various social groups - but an unusual origin, coming almost exclusively from the entourage of the tsar. The work is based largely on original research in Soviet archives, which only became possible after Soviet glasnost.

A fresh, original look at George Washington as an innovative land manager whose singular passion for farming would unexpectedly lead him to reject slavery. George Washington spent more of his working life farming than he did at war or in political office. For over forty years, he devoted himself to the improvement of agriculture, which he saw as the means by which the American people would attain the "respectability & importance which we ought to hold in the world." Washington at the Plow depicts the "first farmer of America" as a leading practitioner of the New Husbandry, a transatlantic movement that spearheaded advancements in crop rotation. A tireless experimentalist, Washington pulled up his tobacco and switched to wheat production, leading the way for the rest of the country. He filled his library with the latest agricultural treatises and pioneered land-management techniques that he hoped would guide small farmers, strengthen agrarian society, and ensure the prosperity of the nation. Slavery was a key part of Washington's pursuits. He saw enslaved field workers and artisans as means of agricultural development and tried repeatedly to adapt slave labor to new kinds of farming. To this end, he devised an original and exacting system of slave supervision. But Washington eventually found that forced labor could not achieve the productivity he desired. His inability to reconcile ideals of scientific farming and rural order with race-based slavery led him to reconsider the traditional foundations of the Virginia plantation. As Bruce Ragsdale shows, it was the inefficacy of chattel slavery, as much as moral revulsion at the practice, that informed Washington's famous decision to free his slaves after his death.

Who Votes Now? compares the demographic characteristics and political views of voters and nonvoters in American presidential elections since 1972 and examines how electoral reforms and the choices offered by candidates influence voter turnout. Drawing on a wealth of data from the U.S. Census Bureau's Current Population Survey and the American National Election Studies, Jan Leighley and Jonathan Nagler demonstrate that the rich have consistently voted more than the poor for the past four decades, and that voters are substantially more conservative in their economic views than nonvoters. They find that women are now more likely to vote than men, that the gap in voting rates between blacks and whites has largely disappeared, and that older Americans continue to vote more than younger Americans. Leighley and Nagler also show how electoral reforms such as Election Day voter registration and absentee voting have boosted voter turnout, and how turnout would also rise if parties offered more distinct choices. Providing the most systematic analysis available of modern voter turnout, Who Votes Now? reveals that persistent class bias in turnout has enduring political consequences, and that it really does matter who votes and who doesn't.
