Combating the Exploitation of Children in Cyberspace: Emerging Research and Opportunities Harper Collins

Bullying has long been tolerated as a rite of passage among children and adolescents. There is an implication that individuals who are bullied must have "asked for" this type of treatment, or deserved it. Sometimes, even the child who is bullied begins to internalize this idea. For many years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child's life. Although bullying behavior endures through generations, the milieu is changing. Historically, bullying has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group formation. In recent years, however, the physical setting is not the only place bullying is occurring. Technology allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of digital electronic communication. Composition of peer groups, shifting demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization. Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and school administrators, health care providers, policy makers, families, and others concerned with the care of children, this report evaluates the state of the science on biological and psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease peer victimization behavior and consequences.

Cyberbullying is one of the darker and more troubling aspects to the growing accessibility of new media technologies. Children in developed countries engage with cyberspace at younger and younger ages, and the use of the internet as a means to bully and harass has been greeted with alarm by educationalists, parents, the media, and governments. This important new book is the result of a four-year international collaboration, funded by the EU, to better understand how we can cope and confront cyberbullying, and how new media technologies can be used to actually support the victims of such abuse. The articles initially define the historical and theoretical context to cyberbullying, before examining key issues involved in managing this pervasive phenomenon. Coverage includes: The definition and measurement of cyberbullying. The legal challenges in tackling cyberbullying across a number of international contexts. The role of mobile phone companies and Internet service providers in monitoring and prevention How the media frame and present the issue, and how that influences our understanding. How victims can cope with the effects of cyberbullying, and the guidelines and advice provided in different countries. How cyber-bullying can continue from school into further education, and the strategies that can be used to prevent it. The ways in which accessing 'youth voice', or maximising the contribution of young people themselves to the research process, can enhance our understanding The book concludes with practical guidance to help confront the trauma that cyberbullying can cause. It will be a valuable resource for researchers, students, policy makers and administrators with an interest in how children and young people are rendered vulnerable to bullying and harassment through a variety of online channels.
