I need to open a workbook, but the filepath is never the same and the filename can also change. I have a master file which have the VBA codes. The right path and filename is in this masterfile. Lets say the filepath is in cell A1 and filename is in A2.

The code you would use to open a workbook with VBA is following:

Workbook answer key A2 - eoigijon

My auto calculate is enabled, and I did use the "Application.Volatile" feature in my code. Apparently a format change alone does not cause Excel to recalculate the spread sheet. I've also tried adding "calculate" to my code, which doesn't work. How can I get my custom function to "refresh" after a format change to a cell?
