Cengage Learning Elementary Algebra is a work text that covers the traditional topics studied in a modern elementary algebra course. It is intended for students who: 1. Have no exposure to elementary algebra, 2. Have had a previously unpleasant experience with elementary algebra, or 3. Need to review algebraic concepts and techniques. Use of this book will help the student

develop the insight and intuition necessary to master algebraic techniques and manipulative skills. The text is written to promote problem-solving ability so that the student has the maximum opportunity to see that the concepts and techniques are logically based and to be comfortable enough with these concepts to know when and how to use them in subsequent sections,

courses, and non-modern, balanced classroom situations. Intuition and understanding are some of the keys to creativity; we believe that the material presented will help make these keys available to the student. This text can be used in standard lecture or self-paced classes.

INTERMEDIATE ALGEBRA:
CONNECTING CONCEPTS THROUGH APPLICATIONS
shows students how to apply traditional mathematical skills in real-world contexts. The emphasis on skill building and applications engages students as they master concepts, problem solving, and communication skills. It modifies the rule of four, integrating algebraic techniques,

graphing, the use of data in tables, and writing sentences to communicate solutions to application problems. The authors have developed several key ideas to make concepts real and vivid for students. First, the authors integrate applications, drawing on real-world data to show students why they need to know and how to apply math. The applications help students develop the skills needed to explain the meaning of answers in the context of the application.

Second, they emphasize strong algebra skills. These skills support the applications and enhance student comprehension. Third, the authors use an eyeball best-fit approach to modeling. Doing models by hand helps students focus on the characteristics of each function type. Fourth, the text underscores the importance of graphs and graphing. Students learn graphing by hand, while the graphing calculator is used to display real-life data problems. In short,
