Denial of Service (DoS) attacks are a form of attack that seeks to make a network resource unavailable due to overloading the resource or machine with an overwhelming number of packets, thereby crashing or severely slowing the performance of the resource.  
Distributed Denial of Service

---

(DDoS) is a large scale DoS attack which is distributed in the Internet. Every computer which has access to the Internet can behave as an attacker. Typically bandwidth depletion can be categorized as either a flood or an amplification attack. Flood attacks can be done by generating ICMP packets or UDP packets in which it can utilize stationary or random variable ports. Smurf and Fraggle attacks are used for amplification attacks. DDoS Smurf attacks are an example of an amplification attack where the attacker sends packets to a network amplifier with the return address spoofed to the victim ' s IP address. This book presents new research and methodologies along with a proposed algorithm for prevention of DoS attacks that has been written based on cryptographic concepts such as birthday attacks to estimate the rate of attacks generated and passed along the routers.

Consequently, attackers would be identified and prohibited from sending spam traffic to the server which can cause DDoS attacks. Due to the prevalence of DoS attacks, there has been a lot of research conducted on how to detect them and prevent them. The authors of this short format title provide their research results on providing an effective solution to DoS attacks, including introduction of the new algorithm that can be implemented in order to deny DoS attacks. This is the fifth, and final book

in the Puzzle series, a set of

books that cover Gill's journey

along the wealth motorway. A

renowned wealth expert, Gill

has regularly been asked about

the route or pathway to wealth.

She has always seen it as a

crowded, pulsating motorway.

There is no single way to wealth;

there are three main methods or

---

paths and although the principles through the others. This is a must-read book for anyone who wants to create their own personal wealth and anyone who wants to be in control of their financial freedom journey and the life of choice that gives them.

for each path are the same, the methodologies are different. Gill's previous best-selling books, *Solving the Property Puzzle*, *Solving the Financial Success Puzzle* and *Solving the Financial Investing and Trading Puzzle*, covers in detail the three lanes of the financial motorway. However, to continue the motorway analogy we all know that to travel a long distance you need to stop at a service station from time to time where both we and our vehicle refresh and replenish ourselves. The same is true of the wealth motorway and at the wealth service station we refresh and replenish ourselves in the same way to make any adjustments in order to achieve greater wealth success going forward. Completing the *Wealth Success Puzzle* is the book that everybody probably should read first because it has all the major answers but it's the one that comes at the end because you can't get to it unless you've been

Failing to have an investment plan is the biggest cause of property investor mistakes such as buying the wrong property, not managing risk, wrong ownership structures, under-performing property and the list goes on. Until now, property investment books and courses haven't addressed key financial planning issues such as working out how many properties you need to buy, correct risk management, retirement strategies, estate planning and so on. The *Property Puzzle* is an easy to understand 'how to' guide, which teaches readers how to develop their own property-based financial plan.

---

Complementary to all other property books, it addresses topics such as defining goals, choosing a property strategy, developing financial forecasts, managing risks, developing a retirement strategy and much more. Throughout the book, we follow the journey of new property investors, David and Susan, and discuss how they tackled certain issues when developing their own financial plan. We also interview Australia's leading property experts to help you through the planning stage. The Property Puzzle is compulsory reading for all property investors. It will show you how to avoid the myriad of mistakes that many investors make. Once you have developed a financial plan, you will feel empowered, knowing you are one step closer to achieving financial security.

Constraint programming is the fruit of several decades of research carried out in mathematical logic, automated deduction, operations research and artificial intelligence. The tools and programming languages arising from this research have enjoyed real success in the industrial world as they contribute to solving hard combinatorial problems in

diverse domains such as production planning, communication networks, robotics and bioinformatics. This volume contains the extended and reviewed versions of a selection of papers presented at the Joint ERCIM/CoLogNET International Workshop on Constraint Solving and Constraint Logic Programming (CSCLP2003), which was held from June 30 to July 2, 2003. The venue chosen for the seventh edition of this annual workshop was the Computer and Automation Research Institute of the Hungarian Academy of Sciences (MTA SZTAKI) in Budapest, Hungary. This institute is one of the 20 members of the Working Group on Constraints of the European Research Consortium for Informatics and Mathematics

(ERCIM). For many participants this workshop provided the first opportunity to visit their ERCIM partner in Budapest. CoLogNET is the European-funded network of excellence dedicated to supporting and enhancing cooperation and research on all areas of computational logic, and continues the work done previously by the Compulog Net. In particular, the aim of the logic and constraint logic programming area of CoLogNET is to foster and support all research activities related to logic programming and constraint logic programming. The editors would like to take the opportunity and thank all the authors who submitted papers to this volume, as well as the reviewers for their helpful work.
