NEW YORK TIMES
BESTSELLER • An inspiring personal story of redemption, second chances, and the transformative power within us all, from the founder and CEO of the nonprofit charity: water. At 28 years old, Scott Harrison had it all. A top nightclub promoter in New York City, his life was an endless cycle of drugs, booze, models—repeat.

But 10 years in, desperately unhappy and morally bankrupt, he asked himself, "What would the exact opposite of my life look like?" Walking away from everything, Harrison spent the next 16 months on a hospital ship in West Africa and discovered his true calling. In 2006, with no money and less than no experience, Harrison founded charity: water. Today, his organization has raised over \$750 million to bring clean drinking water to more than 17.4 million people

around the globe. In Thirst, Harrison recounts the twists and turns that built charity: water into one of the most trusted and admired nonprofits in the world. Renowned for its 100% donation model, bold storytelling, imaginative branding, and radical commitment to transparency, charity: water has disrupted how social entrepreneurs work while inspiring millions of people to join its mission of bringing clean water to everyone on the

planet within our lifetime. In the tradition of such bestselling books as *Shoe Dog* and *Mountains Beyond Mountains*, *Thirst* is a riveting account of how to build a better charity, a better business, a better life—and a gritty tale that proves it ' s never too late to make a change. 100% of the author ' s net proceeds from *Thirst* will go to fund charity: water projects around the world. *Sport Diver*

The last ten years have seen explosive growth in the technology available to the collision analyst, changing the way reconstruction is practiced in fundamental ways. The greatest technological advances for the crash reconstruction community have come in the realms

of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models and visualize and analyze crash vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of

a crash reconstruction. Because of the technological changes occurring in the industry, many SAE papers have been written to address the validation and use of new tools for collision reconstruction. Collision Reconstruction Methodologies Volumes 1-12 bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field. Topics featured in the series include: • Night Vision Study and

Photogrammetry • Vehicle Event Data Recorders • Motorcycle, Heavy Vehicle, Bicycle and Pedestrian Accident Reconstruction The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction - appealing to crash analysts, consultants and safety engineers alike. proceedings of the 21 st International Symposium on Acoustical Imaging, which was held at the Surf and Sand Hotel in Laguna Beach, California, March 28-30, 1994. These unique and highly interdisciplinary series of symposiums have met at intervals of roughly 18 months over the past 30 some years. In general these meetings are devoted to all aspects and all fields of imaging that use acoustics. The meetings are usually small, with 100 to 200 participants, and stimulate useful interchanges across disciplines. These are the only regular meetings where the major researchers in all areas of acoustical imaging can come together to interchange ideas and new concepts. The Acoustical Imaging Symposiums have long been regarded as the premier meeting of this type in the general field of acoustics. The highly regarded and carefully edited proceedings have been published regularly by Plenum Press. I am proud and honored to serve as editor of the 21st volume in this series. The 21st Symposium was attended by well over 100 participants from some 18 countries. During the three day symposium, 94 scientific presentations were given, 66 as formal lectures and 28 in a poster format. Sufficient time was available during the conference, both following the presentations and informally during meals and breaks, for active discussions among all participants. Over 80 of the presentations have been selected for inclusion in these proceedings. Placing Shadows

As scientist begin to understand the complexity of lipid signaling and its roles in plant biology, there is an increasing interest in their analysis. Due to the low abundancy and transient nature of some of these hydrophobic compounds, this is not always easy. In *Plant Lipid Signaling Protocols*, expert researchers in the field detail experimental approaches by which plant signaling lipids can be studied. These methods and techniques include analysis of plant signaling lipids, including detailed protocols to detect various relevant compounds by targeted or non-targeted approaches; to assay relevant

enzyme activities in biological material or using recombinant enzymes; to test for specific binding of signaling lipids to protein partners; or to visualize signaling lipids or lipid-derived signals in living plant cells. Written in the highly successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and key tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, *Plant Lipid Signaling Protocols* aids plant researchers in the continuing to study the roles of lipid signals. [Acoustical Imaging](#)

The diagnosis and identification of plant pathogens provides the basis of plant pathology and phytomedicine. The Executive Committee of the EUROPEAN FOUNDATION FOR PLANT PATHOLOGY (EFPP) had no problem to identify this actual th topic as topic for the 4th Symposium, which was held from September 8 to the 12th at the University of Bonn. It was suggested to have introductory papers and papers on actual research on recently identified topics. The development of diagnosis and pathogen identification is very important to keep

plants healthy and to provide a successful and efficient disease control. On the other hand the most important task of the EUROPEAN FOUNDATION FOR PLANT PATHOLOGY is to improve the international communication, especially in the European hemisphere. Another important duty is to provide the contact between all associated societies - of specific importance seems to be the contact to societies and colleagues from eastern European countries. Times have changed and gratefully we are obliged to hold the contact to our colleagues from the east. During the last meeting we could hold this contact to a certain extent and this should

be a premise for the future. th During 1998 the EUROPEAN FOUNDATION FOR PLANT PATHOLOGY will join the 7 International Congress of Plant Pathology held at Edinburgh from August 9-14, 1998. th The 5 Symposium of the EUROPEAN FOUNDATION FOR PLANT PATHOLOGY will be arranged by our Italian colleagues.

Histotechnology and histomorphometry are the major methodologies in bone and cartilage-related research. Handbook of Histology Methods for Bone and Cartilage

is an outgrowth of the editors' own quest for information on bone and cartilage histology and histomorphometry. It is designed to be an experimental guide for personnel who work in the areas of basic and clinical bone and cartilage, orthopedic, or dental research. It is the first inclusive and organized reference book on histological and histomorphometrical techniques on bone and cartilage specimens. The topic has not previously been covered adequately by any existing books in the field. Handbook of Histology Methods for Bone and Cartilage has six major parts and is designed to be concise as well as inclusive, and more practical than theoretical. The text is

simple and straightforward. Large numbers of tables, line drawings, and micro- or macro-photographs, are used to help readers better understand the content. Full bibliographies at the end of each chapter guide readers to more detailed information. A book of this length cannot discuss every method for bone and cartilage histology that has been used over the years, but it is hoped that major methods and their applications have been included. The Maturation Phenomenon, described by Ito et

al. in 1975 [3] on the basis of his logical observations in the hippocampus as well as other portions of the cerebral hemisphere, refers to the hours or days of delay in the development of pathological changes in various parameters of ischemic injury following the restoration of blood flow to the ischemic brain. There is a direct relationship between the intensity of ischemic insult and the speed and rate of maturation of ischemic injury, a lesser intensity being associated with slower and less severe development of the lesions. The delayed neuronal death of CA1 pyramidal cells of the hippocampus [8] is a classic example. In the cerebral cortex, with increasing intensity of the ischemic insult, the maturation phenomenon of ischemic injuries intensifies, seamlessly, from less extensive to more extensive disseminated selective neuronal necrosis (DSNN), and then further to cerebral infarction upon reaching a critical threshold [1,2,4,6,7]. We also have found that following ischemic insults just under the threshold level required to induce infarction, only disseminated selective neuronal necrosis (DSNN) progresses, while following ischemic insults at the threshold level, initially only DSNN develops, followed by the evolution of a gradually enlarging infarcted focus [5, 7). The reporting of this phenomenon boosted research in the field, as it became evident that ischemic damage is not a sudden event, but a process potentially

susceptible to therapeutic intervention. DVCAM: A Practical Guide to the Professional System, is a nuts and bolts guide for anyone who wants to learn more about Sony DVCAM, to determine what equipment to use, how various models compare, and how to use each of them. A user-friendly overview of the DVCAM format and its equipment, the text covers camcorders, cameras, tape, VTRs, editors, and accessories. The focus is on quick guides (Jump Start chapters) that show how to use the various Sony DVCAM camcorders: DSR-PD100A, DSR-PD150, DSR-250, DSR-300A, and DSR-500WS. Professionals, film students, independent feature filmmakers, schools, government agencies and military

services, and news crews will benefit from its hands-on approach. This comprehensive, hands-on book is an overview of the DVCAM format and its equipment. DVCAM is the professional video standard developed by Sony, based on the consumer DV video format. In the five years since DVCAM was introduced, over 200,000 cameras and VTRs have been sold, making it the best-selling professional format of all time. Telepathology CRC

Press

This book provides a sustained engagement with contemporary Indian feature films from outside the mainstream, including Aaranaya Kaandam, I.D., Kaul, Chauthi Koot, Cosmic Sex, and Gaali Beeja, to undercut the dominance of Bollywood focused film studies. Gopalan assembles films from Bangalore, Chennai, Delhi, Kolkata, and Trivandrum, in addition to independent productions in Bombay cinema, as a way of privileging understudied works that deserve critical attention. The book uses close readings of films and a deep investigation of film style to draw attention to the advent of digital technologies while remaining fully

cognizant of ' the digital ' as a cryptic formulation for considering the sea change in the global circulation of film and finance. This dual focus on both the techno-material conditions of Indian cinema and the film narrative offers a fulsome picture of changing narratives and shifting genres and styles. Handbook of Histology Methods for Bone and Cartilage Springer Developments in telepathology are progressing at a great speed. As a consequence, there is a need for a broad overview of the field. This first ever book on telepathology is presented in such a way that it should

make it accessible to anyone, independent of their knowledge of technology. The text is designed to be used by all professionals, including pathologists, surgeons, nurses and allied health professionals, and computer scientists. In a very short time, driven by technical developments, the field of telepathology has become too extensive to be covered by only a small number of experts. Therefore, this Telepathology book has been written with chapter contributions from a host of renowned international authorities in telepathology (see the Table of

Contents and the List of Contributors).

This ensures that the subject matter focusing on recent advances in telepathology is truly up to date. Our guiding hope during this task was that as editors of multiple chapters we could still write with a single voice and keep the content coherent and simple. We hope that the clarity of this book makes up for any limitations in its comprehensiveness.
