Strong Is the New Skinny Routledge ZigBee is a standard based on the IEEE 802.15.4 standard

for wireless personal networks. This standard allows for the creation of very lost cost and low power networks – these applications run for years rather than months. These networks are created from sensors and actuators and can wireless control many electrical products such as remote controls, medical, industrial, and security sensors. Hundreds of companies are creating applications including Mitsubishi, Motorola, Freescale, and Siemens. This book is written for engineers who plan to develop ZigBee applications and networks, to understand how they work, and to evaluate this technology to see if it is appropriate to a particular project. This book does not simply state facts but explains what ZigBee can do through detailed code examples. *Details how to plan and develop applications and networks *Zigbee sensors have many applications including industrial automation, medical sensing, remote controls, and security *Hot topic for today's electrical engineer because it is low cost and low power Distance Education for Teacher Training Apress For over a decade, Andrew "bunnie" Huang, one of the world's most esteemed hackers,

HWM Simon and Schuster In this witty and perceptive debut, a former editor at Psychology Today shows us how magical thinking makes life worth living. Psychologists have documented a litany of cognitive biases-misperceptions of the world-and explained their positive functions. Now, Matthew Hutson shows us that even the most hardcore skeptic indulges in magical thinking all the time-and it's crucial to our survival. Drawing on evolution, cognitive science, and neuroscience, Hutson shows us that magical thinking has been so useful to us that it's hardwired into our brains. It encourages us to think that we actually have free will. It helps make us believe that we have an underlying purpose in the world. It can even protect us from the paralyzing awareness of our own mortality. In other words, magical thinking is a completely irrational way of making our lives make rational sense. With wonderfully entertaining stories, personal reflections, and sharp observations, Hutson reveals our deepest fears and longings. He also assures us that it is no accident his surname contains so many of the same letters as this imprint. GameAxis Unwired Newnes During his lifetime Brion

Gysin (1916-1986) inspired an array of artists, writers, poets and musicians, notably the Beat Generation. Since his death Gysin's own work has only increased in popularity, yet his radical approach to art defies categorization. Dream Machine is the first detailed study of Gysin's œuvre in both art-historical and contemporary contexts. A devotee of invention, Gysin created paintings, drawings, photo-collages, installations, poetry and sound experiments. He produced the cut-up collage novel The Third Mind (1965) with William Burroughs, and with Ian Sommerville developed the Dreamachine (1961), a kinetic sculpture designed to induce visions by playing flickering light on the closed eyes of the viewer. This exciting new book, featuring incisive texts, a photo essay, and appreciations by contemporary artists, captures the remarkable daring of an artistic visionary.
