This book de-mystifies the jargon of webcams and computer processing, and provides detailed hints and tips for imaging the Sun, Moon and planets with a webcam. It demonstrates how inexpensive tools are

revolutionizing imaging in amateur astronomy. Anyone with a modest telescope and a webcam can now obtain jaw-dropping lunar and planetary images to rival those taken with mid-range astronomical CCD cameras costing thousands of dollars. A glance through the images in this book shows just what spectacular results can be achieved by using a webcam with your telescope! Your scientific results will be sought by professional astronomers.

This unique manual is better than the manual that comes with your camera in several important ways: It's organized according to efficient workflow, so you can get the most out of your Sony A100

quickly and with the least amount of bother. You can find what you're looking for interactively: by using the interactive Table of Contents, choosing one of the questions in the Quick Answers section, or by following any of the convenient links we've placed throughout the document. It's not a book (unless you want it to be). It's a PDF that you can read on your computer or on a PDA that fits into your camera bag. It is laid out on an 8.5 x 11-inch "page" so if you want to print, you won't have to waste paper or spend time configuring your printer. Because it's a PDF, you can find subjects you're looking for by searching electronically. Typing Cmd/Ctrl-F

brings up the familiar search dialog. So all you have to do to jump straight to all the references to a particular part or feature is to enter its name. (No reliance on a mindreading indexer.) The PDF is photographically illustrated so you can see exactly which combination of buttons, knobs, wheels, and menu choices will help you make the magic you are hoping for. In addition to teaching technically correct procedures, this document offers valuable hints for taking photographs in some of the toughest situations.
