LUDWIG J. BERTELE HarperCollins
Just over 100 years ago, 16-year-old

Ludwig J. Bertele began an apprenticeship as an optical designer in Munich. The potential of this young man, so interested in mathematics, did not go unnoticed for long. At the age of only 20, he stunned the experts with an innovative optical design that was surprisingly powerful for that time. This fast, high-resolution lens made it possible to photograph indoors without flash and tripod for the first time. As a result, a well-equipped camera became the basis for the success of numerous famous photographers. The work of Ludwig J. Bertele played a key role in the rapid development of geometrical optics and thus photography after the First World War. Later, his designs also set new standards in aerial

photogrammetry and other specialized fields of optics. This book tells the life story of an exceptionally talented man, autodidact and master of lens element combinations, who repeatedly set important impulses in optics research. International Freight Transport Worth Africa south of the Sahara is a region in transition. The optimism of the early postindependence years has long since faded, replaced by a pervasive sense of crisis that typically includes slow and often negative economic growth, a crushing debt burden, hunger and ecological crisis, and the virtual

collapse of the state in a number of countries. At the same time, the 1990s have seen recent cause for hope -- most dramatically, in the peaceful transition to black majority rule in South Africa. This much-needed text provides a broad and balanced introduction to the geography of this vast region. Examining sociocultural, political, and economic processes, patterns of resource utilization, and the dynamics of change in Africa's geography, the text is enhanced by vivid case studies, maps, and photographs. Also featured are lists of recommended reading and a glossary of key terms.

Africa South of the Sahara Prentice Hall This is the first book that deals with the programming and interfacing aspects of the embedded microprocessor family that has gained wide application in many areas of electronics, communications, and control systems. The book uses the Microsoft Macro assembler program (MASM) that develops many example programming applications using not only the 80186/80188 and 80386EX, but all the Intel family members from the 80486 through the Pentium Pro processor and contains hundreds of applications that can be executed on the personal computer.

A number of interrelated developments are changing the nature of software technology. Developments in hardware are putting greatly increased power at the disposal of the software technologist. Advances in formal methods are providing the means to bring greater precision into the early stages of system development. Techniques such as expert systems are being brought into the domain of software

technology as a result of advances in the application of artificial intelligence research. Developments in paradigms of system development are giving the software technologist better models of system structure and better tools and techniques for creating large systems, and greater political recognition of the importance of information technology is resulting in increased funding for research and development in software technology. This book brings together twenty-one papers on these developments in software technology, selected from papers presented at recent European Seminars on Industrial Software Technology organised by the European Workshop on Industrial Computer Systems (EWICS), whose aim is to promote the effective use of industrial computer systems through education, dissemination of information, and the development of guidelines and standards.

Photographer's Guide to the Sony a6400White Knight Press Hasselblad Compendium A&C Black Violent extremism-generally defined as ideologically, religious, or politically motivated acts of violence-has been perpetrated in the United States by white supremacists, anti-government groups, and radical Islamist entities, among others. In 2011, the U.S. government developed a national strategy and Strategic Implementation Plan (SIP) for countering violent extremism (CVE) aimed at providing information and resources to communities. In 2016, an interagency CVE Task Force led by DHS and DOJ was created to coordinate CVE efforts. GAO was asked to review domestic federal CVE efforts. This report addresses the extent to which (1) DHS, DOJ, and other key stakeholders tasked with CVE in the United States have implemented the 2011 SIP and (2) the federal government has developed a strategy to implement CVE activities, and the CVE Task Force has assessed progress. GAO assessed the status of activities in the 2011 SIP; interviewed officials from agencies leading CVE efforts and a non-generalizable group of communitybased entities selected from cities with CVE frameworks; and compared Task Force activities to selected best practices for multi-agency efforts.
