This fascinating book provides a stimulating introduction to analog electronics by analysing the design and construction of a radio transceiver. Essential theoretical background is given along with carefully designed laboratory and homework exercises. The author begins with a thorough description of basic electronic components and simple circuits and goes on to describe the key elements of radio electronics, including filters, amplifiers, oscillators, mixers, and antennas. Laboratory exercises lead the reader through the design, construction, and testing of a popular radio transceiver (the NorCal 40A). A diskette containing the widely known circuit simulation software, Puff, is included in the book. This was the first book to deal with elementary electronics in the context of radio. It can be used as a textbook for introductory analog electronics courses, for more advanced undergraduate classes on radio-frequency electronics, and will also be of great interest to electronics hobbyists and radio enthusiasts.

This book teaches the reader to build rockets--powered by compressed air, water, and solid propellant--with the maximum possible fun, safety, and educational experience. *Make: Rockets* is for all the science geeks who look at the moon and try to figure out where Neil Armstrong walked, watch in awe as rockets lift off, and want to fly

their own model rockets. Starting with the basics of rocket propulsion, readers will start out making rockets made from stuff lying around the house, and then move on up to air-, water-, and solid propellant-powered rockets. Most of the rockets in the book can be built from parts in the Estes Designer Special kit.

Emma Seaton was comfortably if unexcitingly engaged to Victor Harrison; he was a wealthy business tycoon, and Emma could look forward to a life of ease and luxury with him--but was that all she wanted from life? She became even more aware of her doubts about Victor when she met the disturbing Miguel Salvaje, who made no secret of his attraction to her, and Emma soon admitted to herself that she in turn was attracted to him. The situation grew even more intense when Miguel virtually blackmailed her into marrying him instead of Victor and bore her off to his home in Mexico. The tense situation between them might have resolved itself happily, however, had Emma not discovered that she was expected to share her home with a third person--someone even more overpowering than Miguel himself.
