Digital cameras, both in traditional form factors and as parts of cell phones, have become ubiquitous over the last decade. But for the most part, they remain black boxes to the end-user, and cannot be reprogrammed or modified. This has become an obstacle to researchers in the new field of computational photography, who want to use the growing computing power of digital cameras to create images no traditional camera could produce. This dissertation presents the Frankencamera platform, a digital camera system designed for computational photography. The Frankencamera is a fully open, fully programmable digital camera, which can be easily modified to test out new research ideas. The Frankencamera architecture allows for per-frame control of the capture process, and accurate synchronization of all the components that make up the camera. Based on this architecture, this dissertation details two hardware platforms: the F2, a flexible custom-built camera; and the Nokia N900, a commercial smartphone. Both platforms can be easily programmed at a high level using the FCam API, written to embody the Frankencamera architecture. Finally, this dissertation presents several sample applications for the Frankencamera platform. Several of these applications could not have been developed for any existing camera platform, and the ease and speed at which they were written show that the Frankencamera platform is a compelling tool for computational photography.

In keeping with the demand for more cost effective yet efficient cameras, Sony created and launched the new Sony DSC-W800 camera. The new Sony DSC-W800 camera is one of the latest in Sony's Cyber-shot compact digital releases. It was released to the public in early 2014 and was to serve as a replacement for the previously released W710 camera. The device has received reviews for the inexpensive digital option now available on the market. It provides an alternative without significantly minimizing the quality of the results it will give. The camera offers users a 2.7 inch or approximately 6.7 centimeter TFT LCD screen. This feature is outfitted with brightness control and resolution of up to 230k-dots. The W800 camera also offers a 5X optical zoom lens, 20.1 mega pixels from the built-in Super HAD CCD sensor, an image processing engine, Self-timer, Auto image rotation and Auto Flash. Users will also be able to enjoy the Scene selections and the available shooting modes; creating diversity for shoots.

Photographer's Guide to the Panasonic Lumix LX3: Getting the Most from Panasonic's Versatile Digital Camera is a follow-up to the author's well-received guide to a very similar camera, the Leica D-Lux 4. This new guidebook covers all features and operations of the LX3, one of the most highly esteemed compact digital cameras of recent years. In 232 pages,

with numerous color photographs and illustrations, the book explains in plain language how to achieve the best possible results taking pictures with the automatic or manual controls of the LX3. Although much of the information in this book is similar to that in the earlier book about the Leica D-Lux 4 camera, this new volume is updated to include several new features that were added to both cameras when their internal firmware (operating system) was upgraded to version 2.0. These new features include white balance bracketing, 1:1 aspect ratio, lens resume, and several others. Therefore, the book will be useful to users of the latest versions of both the Panasonic Lumix LX3 and the Leica D-Lux 4.
