habitats and the overlapping of these biotopes by humans and animals contributed to the spread of mycobacteria and perhaps to their convergence to pathogenicity. It was not our intention to present a compendium covering all published results, but rather to issue a “readable” book, which is illustrative and thus focused on the principle facts. The increase in the number of Editors has allowed the sharing of original experiences regarding the ecology of mycobacteria, published here for the first time in some cases. The supplemented edition should serve as a guide to these discoveries and also contribute to an understanding of clinically significant species in human and animal medicine. Borstel, Germany, January 2009 Jindrich Kazda Editors’ Comments The editors responsible for the chapters are listed under the title of each chapter. Authors are listed under the titles of subchapters. The references are listed as they appear in the databases Reference Manager (Thomson Reuters, Philadelphia) as imported from Web of Science (Thomson Reuters, Philadelphia) or PubMed (Medline, NLM Bethesda). A few citations, not indexed, were cited according to the reprints or books available. This principle resulted in minor differences in the titles (not all reference titles are in English, some references have capitalized title words, not all species names are according to the contemporary nomenclature and in italics). Some journals are cited with abbreviated titles, some in full, as available in the source databases. These differences were left in the format of the database.

This book argues that organisms and their interactions create and maximize biodiversity. The evidence for this autocatalytic hypothesis has been collated and integrated into this provocative argument. Natural selection favors the increase of biodiversity. Organisms can be causative agents contributing to major macroevolutionary transitions. Species tend to have a net positive effect on biodiversity. All species are ecosystem engineers. Mutualism and commensalism are common and fundamental, and these coevolved interspecific interactions frequently generate enormous increases in biodiversity. Competition generally does not decrease biodiversity, and often leads to evolutionary innovation. Plants are ecosystem engineers that have made Earth more favorable to life and increased diversity in many ways. Herbivores and predators increase the diversity of the species they consume, and are necessary for ecosystem stability. Decomposers are essential to ecosystem health. All these examples illustrate the focus of this book – that organisms and their interactions stimulate biodiversity, and ecosystems maximize it. Key Features • Describes a hypothesis that life itself generates higher biodiversity • Suggests a highly modified version of the established paradigm in population biology and evolution • Asserts that all species are ecosystem engineers with a net positive effect on biodiversity and their ecosystems • Suggests that mutualism and commensalism are the rule • Presents a novel view likely to elicit deeper discussions of biodiversity Related Titles Dewdney, A. 'Life is bless and love is bliss', is an ode; an ode to life and love. It is a compilation of poetry. Each poetry shares a story; a story that will make you laugh, a story that will make you feel and a story that will make you think. If the entire collection of poems are read together it explains a tale; the tale of human life. The author has divided life as a human into various forms; 'The crawler, the learner, the explorer, the first seeker, the lover, the solitude dreamer, the runner, the second seeker, the third seeker, the second crawler and the sleeper.' The curtains are finally drawn with the sleeper. From crawler to second crawler the humans are offered choices; the choices are love. Every form in life seeks the very love and if it is found there is serenity. The poetry under each form explains love that one spreads and seeks in each form. The final form, 'the sleeper' where the soulless lays down explains that life and its purpose is very simple. The purpose is love and survive.

Little Everything Book No Starch Press

The wildly inventive debut collection of stories by the Oscar-nominated star of The Social Network. “ Hilarious . . . It ’ s a hoot ” (People, The Best New Books). Jesse Eisenberg, known for his iconic film roles, his regular pieces in the New Yorker and two critically acclaimed plays, proves himself “ a deeply original comic voice ” in these 28 stories “ about the funniness, sadness, and strangeness of everyday life and they really made me laugh ” (Roz Chast). Moving from contemporary LA to the dorm rooms of an American college to ancient Pompeii, Eisenberg throws the reader into a universe of social misfits, reimagined scenes from history, and ridiculous overreactions; a college freshman forced to live with a roommate is stunned when one of her ramen packets goes missing ( “ She didn ’ t have ‘ one ’ of my ramens. She had a chicken ramen. ” ); Alexander Graham Bell has teething problems with his invention ( “ I ’ ve been calling Mabel all day, she doesn ’ t pick up! Yes, of course I dialed the right number—2! ” ); and in the title story, a precocious and privileged nine-year-old boy finds himself in the uncomfortable position as an amateur restaurant critic. Featuring illustrations by award-winning cartoonist Jean Jillian, this “ alphabet soup of sketches, riffs, and innovations ” (Seattle Times) explores the various insanities of the modern world, “ playfully bringing both familiar and wholly original scenarios to life ” (Marie Claire). This book discusses the reform and improvement of Chinese legislation on Privately Financed Infrastructure Projects (PFIPs), the goal being to help its implementation in China satisfy international standards. In this regard, current Chinese laws are found to be insufficient when it comes to reducing risks to PFIPs, due to certain shortcomings. Therefore, the corresponding legislation must be reformed and improved. The Legislative Guide and Model Provisions drafted by UNCITRAL are discussed as the international standards that can effectively guide this reform; other countries' laws on PFIPs provide supplementary reference material. Given the rapid rise in the use of PFIPs in China, this book offers a strong theoretical basis for improving Chinese legislation. It also provides general suggestions that can be applied to the reform of laws on PFIPs in any country.
