Street photographers will never tire of New York as a subject. It is the perfect setting for the genre, the world's most evocative cityscape, against which candid, memorable moments play themselves out every day. Nearly a decade ago, Vivienne Guca began walking the streets of the city with the only camera she could afford a sub-\$100 point-and-shoot and started taking pictures. Choosing a direction and going as far as her feet would take her, she noticed lines, forms and structures that had previously gone unnoticed, but which resonated, embodying a sense of home. Having limited equipment forced her to learn about light, composition and color, and her burgeoning talent won her blog millions of readers and wide recognition in the photographic community. New York Through the Lens showcases the stunning results of her ongoing quest. Filled with spectacular photographs and illuminated by Vivienne's own insightful commentary, NY Through the Lens acts as a beautiful travel guide to the city; it will be a must-read for her many fans and for any lover of street photography.

This open access peer-reviewed volume was inspired by the UNESCO UNITWIN Network for Underwater Archaeology International Workshop held at Flinders University, Adelaide, Australia in November 2016. Content is based on, but not limited to, the work presented at the workshop which was dedicated to 3D recording and interpretation for maritime archaeology. The volume consists of contributions from leading international experts as well as up-and-coming early career researchers from around the globe. The content of the book includes recording and analysis of maritime archaeology through emerging technologies, including both practical and theoretical contributions. Topics include photogrammetric recording, laser scanning, marine geophysical 3D survey techniques, virtual reality, 3D modelling and reconstruction, data integration and Geographic Information Systems. The principal incentive for this publication is the ongoing rapid shift in the methodologies of maritime archaeology within recent years and a marked increase in the use of 3D and digital approaches. This convergence of digital technologies such as underwater photography and photogrammetry, 3D sonar, 3D virtual reality, and 3D printing has highlighted a pressing need for these new methodologies to be considered together, both in terms of defining the state-of-the-art and for consideration of future directions. As a scholarly publication, the audience for the book includes students and researchers, as well as professionals working in various aspects of archaeology, heritage management, education, museums, and public policy. It will be of special interest to those working in the field of coastal cultural resource management and underwater archaeology but will also be of broader interest to anyone interested in archaeology and to those in other disciplines who are now engaging with 3D recording and visualization.
