The aim of this atlas is to
provide detailed and

comprehensive, easy-to-use information, sufficient to perform trichoscopy in clinical practice. From basics to advanced knowledge, everything in one book. In this sense it is rather an “illustrated textbook” than solely an atlas. It includes evidence based information, acknowledged algorithms, which help easy diagnosis and “take home messages”, which aid memorizing specific features of diverse diseases. The atlas consists of two major parts. In the first part the authors describe

structures and patterns seen in trichoscopy. The second part consists of detailed description of characteristic trichoscopy features of diverse diseases of hair and scalp. Consecutive chapters illustrate genetic hair disorders, acquired hair loss and scalp diseases.

This paper discusses implementation of the Poverty Reduction Strategy (PRS) in Liberia. Liberia’s PRS articulates the

government’s overall vision and major strategies for moving toward rapid, inclusive, and sustainable growth and development during the period 2008 – 11. This paper provides the context for the PRS by describing the conflict and economic collapse, the transition beyond conflict, and the initial progress achieved during the past two years. It stresses that Liberia must create much greater economic and political opportunities for all its citizens and ensure that

growth and development are widely shared.

The handbook focuses on a complete outline of lithium-ion batteries. Just before starting with an exposition of the fundamentals of this system, the book gives a short explanation of the newest cell generation. The most important elements are described as negative / positive electrode materials, electrolytes, seals and separators. The battery disconnect unit and the battery management system are important parts

of modern lithium-ion batteries. An economical, faultless and efficient battery production is a must today and is represented with one chapter in the handbook. Cross-cutting issues like electrical, chemical, functional safety are further topics. Last but not least standards and transportation themes are the final chapters of the handbook. The different topics of the handbook provide a good knowledge base not only for those working daily on electrochemical energy storage, but also to scientists, engineers and

students concerned in modern battery systems. **Lithium-Ion Batteries: Basics and Applications**

Here, leading contributors from the forefront of this exciting technology present authoritative and timely reviews on the state of the art of biocatalysis. They cover the whole spectrum from the discovery of novel enzymes - by modern screening, evolutionary or

immunological approaches - through immobilization techniques for technical processes, to their use in the asymmetric synthesis of important target compounds.

This book offers a thorough and up-to-date treatment of the use of morphometric procedures in a wide variety of contexts. As one of the most dynamic and popular fields on the contemporary

biological scene, morphometrics is gaining notice among researchers and students as a necessary complement to molecular studies in the understanding and maintenance of biodiversity. This is the first reference to meet that growing need.

These highly varied studies, spanning the world, demonstrate how much modern analyses of microscopic traces on artifacts are altering our perceptions of the past. Ranging from early humans to modern kings, from ancient Australian spears or Mayan pots to recent Maori cloaks, the contributions demonstrate how starches, raphides, hair, blood, feathers, resin and DNA have become essential elements in archaeology.

90 Two By: Dastan Khalili
DiaVerse, dia meaning “two” and verse for the poetic rhyme, is a brand-new style of poetry where the only rule is all stanzas must have a maximum of two words. Created by poet Dastan Khalili, the style of DiaVerse breathes new life into poetry. The restraint of DiaVerse forces poets to use the purest forms of

expression. 90 Two is ninety of Khalili's DiaVerse poems, written over the last five years. He combines his poetic verses with digital artwork and imagery, each conveying a sensation of inspiration that came to life with each poem.

"This is the first machine-generated scientific book in chemistry published by Springer Nature. Serving as an innovative prototype defining the current status of the technology, it also provides an overview about the latest trends of lithium-ion batteries research. This book explores future ways of informing researchers and

professionals. State-of-the-art computer algorithms were applied to: select relevant sources from Springer Nature publications, arrange these in a topical order, and provide succinct summaries of these articles. The result is a cross-corpora auto-summarization of current texts, organized by means of a similarity-based clustering routine in coherent chapters and sections. This book summarizes more than

150 research articles published from 2016 to 2018 and provides an informative and concise overview of recent research into anode and cathode materials as well as further aspects such as separators, polymer electrolytes, thermal behavior and modelling. With this prototype, Springer Nature has begun an innovative journey to explore the field of machine-generated content and to find answers to the manifold

questions on this fascinating topic. Therefore it was intentionally decided not to manually polish or copy-edit any of the texts so as to highlight the current status and remaining boundaries of machine-generated content. Our goal is to initiate a broad discussion, together with the research community and domain experts, about the future opportunities, challenges and limitations of this technology."--Publisher's
