Abstract The utilization  
of employees often is the  
only measure for

success of engineering

services units. The

question how many days

of paid services can be

billed to a customer is so

dominant that other

aspects are completely

neglected. However,

focusing on maximizing

just one, financial, value

– revenue by employee -

might not be sufficient to  
guarantee sustainable

success. The aim of this

dissertation is to develop

a management instrument

for an engineering

services unit based on

the balanced scorecard

approach. Even though

the value of human

capital often receives

only little attention,

employees are the key

differentiator of an

enterprise. The

knowledge, experience

and attitude of people can

not easily be copied by

competitors. Since human

capital ' s contribution to

business success is

difficult to measure, it

often plays no role in

management systems.

This situation can only

change if the value of

human capital can be

determined and

represented. The term

“ human capital ” is

---

explained in more detail in the first part of this work. What is human capital and why is it becoming increasingly important? Several approaches to determining human capital are described and analysed. In the second part of this work, a Balanced Scorecard is developed on a step-by-step basis for an engineering services unit. Particular attention is paid to the human capital aspect. However, the purpose of this work is not to develop a scorecard that serves only to assess and control human capital variables. Examples of such dedicated Balanced Scorecards are the HR-Scorecard and the Human Capital Management Scorecard. However, these Scorecards may

complement the traditional Scorecard, but cannot replace it. They are focused on human resource figures only and thus are not linked with other measures, such as financial indicators. The Balanced Scorecard to be developed for the engineering services unit should reflect the strategy of the business unit. The idea is to use this Balanced Scorecard as a management tool in future. Therefore the Balanced Scorecard design will follow the traditional approach but put special emphasis on human capital.

The English edition of this

---

book has been prepared from the third German edition published in December 1974. The first two German editions, published in 1971 and 1972, respectively, were very well received in Germany. We hope that this English version will enjoy a similar popularity by students wishing to understand the essential concepts relevant to the fascinating field of neurophysiology. The evolution of this book has been unique. The first edition was based on a series of lectures presented for many years to first-year physiology students at the Universities of Heidelberg and Mannheim. These lectures were converted into a series of 38 programmed texts, and after extensive testing, published as a programmed textbook of neurophysiology (Neurophysiologie programmiert, Springer-Verlag Heidelberg, 1971). Thereafter the present text was written and thoroughly brought up to date. Throughout this period all of

the authors were members of the Department of Physiology in Heidelberg allowing for maximum cooperation at all stages of this endeavor. With regard to the English edition, I wish to express my appreciation to Mr. Derek Jordan and Mrs. Inge Jordan for translating this book, and to my colleagues Dr. Mark Rowe and Dr. Dean O. Smith for their valuable comments and suggestions on the English manuscript. I express my grateful thanks to the publishers, both in Heidelberg and New York, for their unfailing courtesy and for their extraordinary efficiency.

What is fuzzy logic?--a system of concepts and methods for exploring modes of reasoning that are approximate rather than exact. While the engineering community has appreciated the advances in understanding using fuzzy logic for quite some time,

---

fuzzy logic's impact in non-engineering disciplines is only now being recognized. The authors of Fuzzy Logic in Geology attend to this growing interest in the subject and introduce the use of fuzzy set theory in a style geoscientists can understand. This is followed by individual chapters on topics relevant to earth scientists: sediment modeling, fracture detection, reservoir characterization, clustering in geophysical data analysis, ground water movement, and time series analysis. George Klir is the Distinguished Professor of Systems Science and Director of the Center for Intelligent Systems, Fellow of the IEEE and IFSA, editor of nine volumes, editorial board member of 18 journals, and author or co-author of 16 books. Foreword by the inventor of fuzzy logic-- Professor Lotfi Zadeh

### Death on the River

Freud, although best known for his elucidation of the unusual in human mental life, also attempted to illuminate ordinary human experience, such as people's appreciation of humor, their capacity to become engrossed in fiction, and their disposition to a variety of emotional experiences, including the uncanny, the stirrings prompted by beauty, and their disposition to mourn. His insights into the everyday

and his sense of where within it the productive questions lie reveal an incisiveness that defies both earlier and subsequent thought on his topics. This book works to expose that vision and to demonstrate its fertility for further inquiry. It reconstructs several of Freud's works on ordinary mental life, tracking his method of inquiry, in particular his search for the child within the adult, and culminating in a deployment of his tools independently of his analyses. It shows how to read Freud for his insight and generativity and how to push beyond the confines of his analyses in pursuit of new lines of exploration.

### **Giving Places Meaning**

This book is about the way

---

that professionals in archaeology and in other sectors of heritage interact with a range of stakeholder groups, communities and the wider public. Whilst these issues have been researched and discussed over many years and in many geographical contexts, the debate seems to have settled into a comfortable stasis wherein it is assumed that all that can be done by way of engagement has been done and there is little left to achieve. In some cases, such engagement is built on legislation or codes of ethics and there can be little doubt that it is an important and significant aspect of heritage policy. This book is different, however, because it questions not so much the motivations of heritage professionals but the nature of the engagement itself, the extent to which this is

collaborative or contested and the implications this has for the communities concerned. Furthermore, in exploring these issues in a variety of contexts around the world, it recognises that heritage provides a source of engagement within communities that is separate from professional discourse and can thus enable them to find voices of their own in the political processes that concern them and affect their development, identity and well-being. This book was published as a special issue of the International Journal of Heritage Studies.

*Merry Xmas Coloring Book*

Since its inception, the Journal of Environmental Psychology has demonstrated its pre-eminence through publishing original, innovative papers. By bringing them together in one volume, ready access has been provided to the first-hand accounts of a range of explorations that are central to the growth and development of environmental psychology itself. There is now an agreement amongst most environmental psychology

researchers that particular locations within the environment do harbour rich significance for individuals and groups. There is a great deal of productive debate about the cognitive and affective processes that give rise to this significance, but it is clear that the significance of places can include both deep emotional attachment and more abstract aesthetic enjoyment. Psychologists have been rather reluctant to examine the content of personal meanings, except in the intensity of the therapeutic interview, leaving such explorations to literary critics. The present volume goes some way to redress that balance and show the value of tackling meaning head on, rather than through the lens of structure and form. This volume will therefore be of value beyond environmental

---

psychology in showing the value of studying meanings in context and the ways in which they give our world significance.
