This volume contains the proceedings of the International Middleware Conference, held in Leuven, Belgium during December 1–4, 2008. This year marked the ninth rendition of this annual conference in its current format initially - opted in 1998, aspiring to serve as the premier venue focusing exclusively on important middleware results. A lot has happened over the intervening 10-year span.

Middleware has become pervasive in an increasingly interconnected world, with its concepts now securely embedded in the notional architectures driving forward the information age. The conference continues to be a focal point for important new initiatives and results for new generations of middleware. With each succeeding year, it has become an even more competitive publishing venue, further extending its selectivity this year as well. Of the 117 submissions, only 21 were able to receive acceptance invitations, for an acceptance

rate of less than 18%. Competitive indeed. Additionally, these submissions continue to come from all over the globe, spanning authors from 23 countries. A truly world-wide endeavor. But other things have also changed as we turn the corner on the first decade of this conference. In many ways, middleware has achieved significant success where it really counts: in terms of technical innovations, advanced capabilities, successful ideas, and fielded systems which permeate society, industry, government, and academia. With this success comes maturity.

As the media converges with the telecommunication industry leveraging content becomes key for both formerly separate industries. As new channels are offered and used to distribute various contents - from music to games, from text to videos - companies have to think about innovative ways to even more profit from providing the channels or from providing the content or from providing both. New business models are emerging that are made for leveraging content and finding their way to the customers. This book explains why and how more content leverage becomes reality.

You can measure practically anything in the age of social media, but if you don't know what you're looking for, collecting mountains of data won't yield a grain of insight. This non-technical guide shows you how to extract significant business value from big data with Ask-Measure-Learn, a system that helps you ask the right questions, measure the right data, and then learn from the results. Authors Lutz Finger and Soumitra Dutta originally devised this system to help governments and NGOs sift through volumes of data. With this book, these two experts provide business managers and analysts with a high-level overview of the Ask-Measure-Learn system, and demonstrate specific ways to apply social media analytics to marketing, sales, public relations, and customer management, using examples and case studies.
