Mobile Telecommunications in a High Speed World tells the story of 3G and higher-speed mobile communication technologies. Over ten years have passed since the first third-generation (3G) licences were awarded following debates about the merits of auctions versus 'beauty contests' then, nothing much happened. More licences were issued, a few roll-outs commenced and everyone began to think it had all been a horribly expensive mistake. That may still turn out to be the case, but in the meantime there have been massive developments in terms of the number of licences and launches worldwide, in the range of services that can be accessed, in the range of devices that can be used to access them, in operator strategies etc. Even the technology has improved considerably with 4G now under discussion. Much of this story has been chronicled, largely on the Internet, but the information is in tens of thousands of bits and pieces and a large part of it is either misleading or just plain wrong. Here, Peter Curwen and Jason Whalley introduce the outcomes of research that has involved the compilation of a unique database which details every licence and launch worldwide involving 3G. The authors discuss the structure of the industry and the strategic behaviour of operators, as well as the social consequences of the

spread of 3G. They examine the role of new entry upon competition, and present analysis of the main operators involved, the development of handsets and especially smartphones. A number of country case studies are included. This comprehensive and up-to-date volume includes a number of country studies and is written by two of the world's foremost researchers on this industry. Mobile Telecommunications in a High Speed World will serve the needs of students, academics and those involved, or contemplating involvement, with the telecoms industry. Why pay thousands of dollars to consultancies to separate the wheat from the chaff with respect to 3G when you can read this book.

El actual capitalismo, definido como capitalismo financiero, es paralelamente capitalismo reputacional. Un mundo virtual lleno de signos y productos de futuro más que de realidades y presente en el cual todo es cuestión de fiabilidad, credibilidad, crédito y confianza. Agentes públicos y corporaciones de todo tipo han tenido que "fabricarse un alma" que las hiciese reconocibles y creíbles, una marca y demás activos inmateriales e intangibles que en ese entorno se mueven. La gestión y manejo de esos intangibles ha entrado de lleno en las estrategias de los negocios y de la política desde la década de 1980. Se trata de activos reconocidos y presentes en cuentas de resultados, en objetivos, en balances y en beneficios, englobados en torno al término "reputación". La "reputación" responde al definitivo redescubrimiento del "cliente" como entidad final objeto de cualquier actividad e iniciativa pública y de mercado, al focalizar toda la actividad de las instituciones y empresas desde el cliente final. La "reputación" es la respuesta, el retorno, que el individuo, el grupo, el mercado, la opinión, dan como interlocutores a la posición de una

corporación en la sociedad. De esto trata este ensayo, de cómo se ha sistematizado el capitalismo reputacional, de cómo se han creado, organizado y gestionado los activos inmateriales, de cómo la comunicación, sus medios y herramientas son el sistema que soporta reputación e intangibles, de cómo la comunicación y los intangibles han evolucionado hasta posicionarse en el corazón mismo de las organizaciones y de los negocios, constituyéndose, junto con las finanzas, en componente esencial de la época que estamos viviendo y en uno de los fundamentos del mundo del inmediato futuro.

In the beginning of EKAW

, the modeling and acquisition of knowledge was the privilege of — or rather a burden for — a few knowledge engineers familiar with knowledge engineering paradigms and knowledge representation formalisms. While the aim has always been to model knowledge declaratively and allow for reusability, the knowledge models produced in these early days were typically used in single and very specific applications and rarely changed. Moreover, these models were typically rather complex, and they could be understood only by a few expert knowledge engineers. This situation has changed radically in the last few years as clearly indicated by the following trends: — The creation of (even formal) knowledge is now becoming more and more collaborative. Collaborative ontology engineering tools and social software platforms show the potential to leverage the wisdom of the crowds (or at least of “ the many ” ) to lead to broader consensus and thus produce shared models which qualify better for reuse. — A trend can also be observed towards developing and publishing small but high-impact vocabularies (e.g., FOAF, DublinCore, GoodRelations) rather than complex and large knowledge models. The American edition of the revelatory Swedish book Spotify Untold, the basis of the new Netflix Original series slated for 2022! "Two excellent Swedish journalists recount the historic rise of the company that changed modern music not just as a riveting business tale, but as a lesson in tech geopolitics. Spotify's Daniel Ek shows why Silicon Valley does not always win. " —David Kirkpatrick, New York Times bestselling author of The Facebook Effect Steve Jobs tried to stop this moment from ever happening. Google and Microsoft made bids to preempt it. The music industry blocked it time and again. Yet, on a

summer's eve in 2011, the whiz kid CEO of a Swedish start-up celebrated his company's US launch. In the midst of the Apple-Android tech war and a music label crusade against piracy and illegal downloading, Spotify withdrew the battle lines, sent shockwaves through Silicon Valley, and got the hardline executives at Universal, Sony, and Warner to sign with its "free-mium" platform. In The Spotify Play, now adapted into an upcoming Netflix Original series, Swedish investigative tech journalists Sven Carlsson and Jonas Leijonhufvud, who covered the company from its inception, draw upon hundreds of interviews, previously untapped sources, and in-depth reporting on figures like Mark Zuckerberg, Sean Parker, Steve Jobs, Taylor Swift, Jay-Z, Pony Ma Huateng, and Jimmy Iovine. They have captured the riveting David vs. Goliath story of a disruptive innovator who played the industry giants in a quest to revolutionize the consumption of sound, building today's largest online source of audio, with more than 50 million songs, one million-plus podcasts, and over 300 million users.

The proceedings of ICAR2011 have been published by Springer Lecture Notes in Electrical Engineering, which include 163 excellent papers selected from more than 400 submitted papers. The conference is intended to bring together the researchers and engineers/technologists working in different aspects of intelligent control systems and optimization, robotics and automation, signal processing, sensors, systems modeling and control, industrial engineering, production and management. This part of proceedings includes 81 papers contributed by many researchers in relevant topic areas covered at ICAR2011 from various countries such as France, Japan, USA, Korea and China etc. Many papers introduced their advanced research work recently; some of them gave a new solution to problems in the field, with powerful evidence and detail

demonstration. Others stated the application of their designed and realized systems. The session topic of this proceeding is intelligent control and robotics and automation, which includes papers about Distributed Control Systems, Intelligent Fault Detection and Identification, Machine Learning in Control, Neural Networks based Control Systems, Fuzzy Control, Genetic Algorithms, Robot Design, Human-robots Interfaces, Network Robotics, and Autonomous Systems, Industrial Networks and Automation, Modeling, Simulation and Architectures, Vision, Recognition and Reconstruction, Virtual Reality, Image Processing, and so on. All of papers here involved the authors' numerous time and energy, will be proved valuable in their research field. Sincere thanks to the committee and all the authors, moreover anonymous reviewers from many fields and organizations. That is a power for all of us to go on research work for the world.
