El actual capitalismo, definido como capitalismo financiero, es paralelamente capitalismo reputacional. Un mundo virtual lleno de signos y productos de futuro más que de realidades y presente en el cual todo es cuestión de fiabilidad, credibilidad, crédito y confianza. Agentes públicos y corporaciones de todo tipo han tenido que "fabricarse un alma" que las hiciese reconocibles y creíbles, una marca y demás activos

inmateriales e intangibles que en ese entorno se mueven. La gestión y manejo de esos intangibles ha entrado de lleno en las estrategias de los negocios y de la política desde la década de 1980. Se trata de activos reconocidos y presentes en cuentas de resultados, en objetivos, en balances y en beneficios, englobados en torno al término "reputación". La "reputación" responde al definitivo redescubrimiento del "cliente" como entidad final objeto de cualquier actividad e iniciativa pública y de mercado, al focalizar toda la actividad de las instituciones y empresas desde el cliente final. La "reputación" es la respuesta, el retorno, que el individuo, el grupo, el mercado, la opinión, dan como interlocutores a la posición de una corporación en la sociedad. De esto trata este ensayo, de cómo se ha sistematizado el capitalismo reputacional, de cómo se han creado, organizado y gestionado los activos inmateriales, de cómo la comunicación, sus medios y herramientas son el sistema que soporta reputación e intangibles, de cómo la comunicación y los intangibles han evolucionado hasta posicionarse en el corazón mismo de las organizaciones y de los negocios, constituyéndose, junto con las finanzas, en componente esencial de la época que estamos viviendo y en uno de los fundamentos del mundo del inmediato futuro.

This book is open access under a CC BY 4.0 license. This book is intended primarily for practitioners who are facing the

“softwareisation” of their business. It presents the Scaling Management Framework, a model based on collected experiences from companies that have already made the journey to give software a central role within the organization. The model is unique because it suggests a holistic method to analyze and plan your journey. It simply means that you can't just focus solely on your products or services. You

also have to look closely at your processes and your organization, the way you make decisions and get things done. Inevitably, these will have to change. Software has changed the rules of the game. The world talks about the digitalization in industry and society – how the focus has shifted from producing tangible things towards software and services. This trend started many years ago, but is now affecting every company, whether it's a software company or not. There are many companies that have already made a digitalization journey – and many are about to embark on this journey – like you. How do you transform your organization when software is becoming a critical part of your business? This book comes with a map, a compass, and suggested journeys along with selected travel stories comprising best practices and lessons learned from past digitalization journeys. Use the map to find your way in the digitalization landscape, and use the compass to find the direction of your journey.

Er beschließt, seiner Exfreundin zu beweisen, dass aus dem vermeintlichen Weichei ein harter Kerl geworden ist. Nach gescheiterten Selbstversuchen auf grotesken Partys, im Rotlichtmilieu und beim Speeddating scheint sein Vorhaben zu scheitern – bis ihm das Schicksal die Tür zur Verwirklichung seines Traums öffnet. Knowledge Management and Knowledge Engineering is a fascinating field of research these days. In the beginning of EKAW, the modeling and acquisition of knowledge was the privilege of – or rather a burden for – a few knowledge engineers familiar with knowledge engineering paradigms and knowledge representation formalisms. While the aim has always been to model knowledge declaratively and allow for reusability, the knowledge models produced in these early days were typically used in single and very specific applications and rarely changed. Moreover, these models were typically rather complex, and they could be understood only by a few expert knowledge engineers. This situation has changed radically in the last few years as clearly indicated by the following trends: – The creation of (even formal) knowledge is now becoming more and more collaborative. Collaborative ontology engineering tools and social software platforms show the potential to leverage the wisdom of the crowds (or at least of “the many”) to lead to broader consensus and thus produce shared models which qualify better for reuse. – A trend can also be observed towards developing and publishing small but high-impact vocabularies (e.g., FOAF, DublinCore, GoodRelations) rather than complex and large knowledge models.
