The European zebra mussel in the Great Lakes, a toxic Japanese dinoflagellate transferred to Australia--such biologically and economically harmful stowaways have made it imperative to achieve better management of ballast water in ocean-going vessels. *Stemming the Tide* examines the introduction of nonindigenous species through ballast water discharge. Ballast is any solid or liquid that is taken aboard ship to achieve more controlled and safer operation. This expert volume Assesses current national and international approaches to the problem and makes recommendations for U.S. government agencies, the U.S. maritime industry, and the member states of the International Maritime Organization. Appraises technologies for controlling the transfer of organisms--biocides, filtration, heat treatment, and others --with a view toward developing the most promising methods for shipboard demonstration. Evaluates methods for monitoring the effectiveness of ballast water management in removing unwanted organisms. The book addresses the constraints inherent in ballast water management, notably shipboard ballast treatment and monitoring. Also, the committee outlines efforts to set an

acceptable level of risk for species introduction using the techniques of risk analysis. *Stemming the Tide* will be important to all stakeholders in the issue of unwanted species introduction through ballast discharge: policymakers, port authorities, shippers, ship operators, suppliers to the maritime industry, marine biologists, marine engineers, and environmentalists.

When the state of Massachusetts proposes to replace Salt Cove's wooden footbridge with a concrete highway bridge, the village's residents respond with legal action, protests, and, finally, secession. Characters on both sides of the fight take turns narrating, but unconventional septuagenarian Jessica Stoddard and Toby Auberon, a former lawyer who lives in the lighthouse, dominate. Toby gets caught up in leading the fight, though at heart he'd rather be spending his time building the world's greatest pinball machine.

*Hydatid disease (echinococcosis)*, caused by the tapeworm *Echinococcus*, is a public health and economic problem of global proportions. Treatment of this zoonotic infection usually requires major surgery and the prognosis for some forms of the disease is poor. Control efforts have had little impact globally and new foci of infection and regions of endemicity have recently been recognized. However, in addition to its medical, veterinary and economic significance, *Echinococcus* is an intriguing biological phenomenon. This book presents a complete synthesis of all aspects of *Echinococcus* and *Hydatid Disease*. It builds on the success of a previous volume *The Biology of Echinococcus and Hydatid Disease* by Allen & Unwin, 1986, and details the major advances that have taken place since. In addition, the scope of the book has been broadened to include genetics, evolutionary biology, epidemiology and clinical features. The overriding theme of the book is that a comprehensive understanding of the biology of *Echinococcus* is essential for the effective treatment and control of *Hydatid Disease*. The links between laboratory knowledge and field applications are emphasised throughout the book.

Consequently, research workers, teachers and students of parasitology, clinicians and field workers, will find this work an indispensable source of information, but it will also provide a model for the integration of basic and applied research in parasitology.

*The Illustrated Practical Guide to Digital and Classic Photography* Oxford University Press, USA

The textile industry found its roots in Connecticut along the banks of the Housatonic and Naugatuck Rivers between Waterbury and Bridgeport. From the early 1800s, when David Humphries, former aide-de-camp to Gen. George Washington, brought the woolen industry to America, to the 1950s, when the vast Sidney Blumenthal Mills moved to the South, the textile industry shaped life in the Naugatuck Valley. The industry witnessed labor actions, inspired cultural expression, and experienced the growth of shipping by road, water, and rail. Workers produced felted wool, cotton, and silk fabrics, velvet, fake fur, wool hosiery, buttons, ribbons, and various other goods, laying the foundation for the prosperity enjoyed by the valley today.

This richly illustrated book presents a straightforward non-instrumental method of clinical facial analysis in preparation for aesthetic surgery, orthognathic surgery, and orthodontic treatments. After discussion of various practical aspects of facial examination and photography, analysis of different regions of the face and dentofacial deformities is discussed in a series of detailed chapters. At the end of each of these chapters, multiple-choice checklists are included that will help the reader to perform step-by-step regional analysis. Important features of the book are its multidisciplinary approach and the emphasis placed on the relationship between different parts of the face. This second edition has been thoroughly updated and includes a new chapter on recording and documentation relating specifically to aesthetic facial surgery.

A must-have read for anyone looking to take their independently-produced film or video into the 3rd dimension. The text features technical, practical, and inspirational insight from the visionaries who've been producing 3D film and video for decades, not just in the recent past. They offer low-cost techniques and tricks they've been implementing themselves for years. A variety of styles are discussed, from full CG to time lapse - even a film made during a freefall skydive jump! The filmmakers discuss \* Options for on-set playback \* Preparing for final playback in various formats \* Adapting existing technology to your needs \* Post production software choices \* Working with computer graphics in 3D This book includes 3D glasses and a companion YouTube channel featuring the work of the filmmakers featured in the book (which you can view in 3D with the glasses), as well as the opportunity for you to upload your own videos for critique and feedback from the author and others. 3D glasses are not included in the purchase of the e-book of 3-DIY. If you have purchased the e-book, and would like a pair of 3D glasses, please contact the publisher at [Dennis.McGonagle@taylorandfrancis.com](mailto:Dennis.McGonagle@taylorandfrancis.com)

#### Say No To Arthritis Series in Affective Science

Volume 1: The Ear (edited by Paul Fuchs) Volume 2: The Auditory Brain (edited by Alan Palmer and Adrian Rees) Volume 3: Hearing (edited by Chris Plack) Auditory science is one of the fastest growing areas of biomedical research. There are now around 10,000 researchers in auditory science, and ten times that number working in allied professions. This growth is attributable to several major developments: Research on the inner ear has shown that elaborate systems of mechanical, transduction and neural processes serve to improve sensitivity, sharpen frequency tuning, and modulate response of the ear to sound. Most recently, the molecular machinery underlying these phenomena has been explored and described in detail. The development, maintenance, and repair of the ear are also subjects of contemporary interest at the molecular level, as is the genetics of hearing disorders due to cochlear malfunctions.

Orthodontic Pearls: A Selection of Practical Tips and Clinical Expertise synthesizes a wealth of information gleaned from clinical and administrative experiences in orthodontic practice. The administration and running of an orthodontic practice is not often taught extensively or formally in most schools. This book fills that gap by providing tips, Information Technology and Intelligent Transportation Systems Plum "Amphibians are facing an extinction crisis, but getting to the facts has been difficult. "Threatened Amphibians of the World" is a visual journey through the first-ever comprehensive assessment of the conservation status of the

world's 6,000 known species of frogs, toads, salamanders, and caecilians. All 1,900 species known to be threatened with extinction are covered, including a description of threats to each species and an evaluation of conservation measures in place or needed. Each entry includes a photograph or illustration of the species where available, a distribution map, and detailed information on range, population and habitat and ecology. Introductory chapters present a detailed analysis of the results, complemented by a series of short essays written by many of the world's leading herpetologists. Appendices include annotated lists of lower risk species and a country-by-country listing of threatened amphibians."--pub. desc.
