Joe Carr has provided radio amateurs and short-wave listeners with the definitive design guide for sending and receiving radio signals with Antenna Toolkit 2nd edition. Together with the powerful suite of CD software, the reader will have a complete solution for constructing or using an antenna - bar the actual hardware! The software provides a simple Windows-based aid to carrying out the design calculations at the heart of successful antenna design. All the user needs to do is select the antenna type and set the frequency - a much more fun and less error prone method than using a conventional calculator to solve formulae. The new edition has been revised to include further cases of propagation, additional antennas and also two new chapters - Small Loop Antennas (a topic of considerable

interest, which has been the subject of much recent debate in the amateur radio press); and Yagi Beam Antennas (widely used at HF and VHF). The CD software has also been updated. Joe Carr's expertise in the area of antenna design is legendary. Antenna designers, whether hobbyist or technician, can be assured they need look no further than Antenna Toolkit for the complete guide to understanding the practicalities of using and designing antennas today. A complete solution for antenna design in one package. Includes free CD-ROM with state of the art software for all design calculations. This book is a comprehensive introduction to dalits in India (who comprise over one-sixth of the country's population) from the origins of caste system to the present day. Despite a plethora of provisions for affirmative action in the Indian Constitution, dalits are largely

excluded from the mainstream except for a minuscule section. The book traces the multifarious changes that befell them during the colonial period and their development thereafter under the leadership of Babasaheb Ambedkar in the centre of political arena. It looks at hitherto unexplored aspects of the degeneration of the dalit movement during the post-Ambedkar period, as well as salient contemporary issues such as the rise of the Bahujan Samaj Party, dalit capitalism, the occupation of dalit discourse by NGOs, neoliberalism and its impact, and the various implicit or explicit emancipation schemas thrown up by them. The work also discusses ideology, strategy and tactics of the dalit movement; touches upon one of the most contentious issues of increasing divergence between the dalit and Marxist movements; and delineates the role of the state, both colonial and post-colonial, in shaping dalit politics in particular ways. A tour de force, this book brings to the fore many key contemporary concerns and will be of great interest to students, scholars and teachers of politics and political economy, sociology, history, social exclusion studies and the general reader.

THE DEFINITIVE ANTENNA REFERENCE--FULLY REVISED AND EXPANDED! Design and build your own antennas with the help of this unique guide.

Updated and revised to provide clear answers to questions frequently asked by hobbyists and electronics technicians, *Practical Antenna Handbook, Fifth Edition* blends theoretical concepts with hands-on experience--requiring only high school mathematics Reorganized to flow logically from broad physical principles to specific antenna design and construction techniques, the book begins by covering the fundamentals. Then the half-wave dipole is discussed both as an excellent antenna in its

own right and as a conceptual tool for predicting the performance of other designs. Transmission line impedance matching techniques--and a companion Smith chart tutorial--lead into "must have" accessories for tuning, monitoring, and troubleshooting antenna system performance. Other tools, such as antenna modeling software and network analyzer add-ons for PCs and Macs, are addressed, and concluding chapters offer fresh insights into support structures and installation techniques. NEW TOPICS COVERED INCLUDE: Characteristics of all-driven and parasitic arrays Beverages and small MF/HF receiving loops Top-loaded shunt-fed towers and other verticals Theory and design of Yagi beams Effect of real ground on propagation and antenna patterns, impedance, and efficiency Lightning protection and four kinds of ground systems Zoning and restrictive covenants COVERS A WIDE VARIETY OF ANTENNAS: Dipoles and inverted-Vs Quads, delta, and NVIS loops Wire arrays (bobtail curtain, half-square, rhombic) Verticals and shunt-fed towers Rotatable Yagi beams MF/HF receiving antennas (flag, pennant, K9AY, Beverage) Mobile and portable antennas VHF/UHF/microwave antennas And many more GO TO [WWW.MHPROFESSIONAL.COM/CARR5](http://WWW.MHPROFESSIONAL.COM/CARR5) FOR: \* Tables of worldwide geographic coordinates and antenna dimensions vs. frequency \* Supplier updates \* Author's blog \* Additional photographs and

Video Electronics Technology Grove/Atlantic Techniques based on the method of modal expansions, the Rayleigh-Stevenson expansion in inverse powers of the wavelength, and also the method of moments solution of integral equations are essentially restricted to the analysis of electromagnetic radiating structures which are small in terms of the wavelength. It therefore becomes necessary to employ approximations based on "high-frequency techniques" for performing an efficient analysis of electromagnetic radiating systems that are large in terms of the wavelength. One of the most versatile and useful high-frequency techniques is the geometrical theory of diffraction (GTD), which was developed around 1951 by J. B. Keller [1,2,3]. A class of diffracted rays are introduced systematically in the GTD via a generalization of the concepts of classical geometrical optics (GO). According to the GTD these diffracted rays exist in addition to the usual incident, reflected, and transmitted rays of GO. The diffracted rays in the GTD originate from certain "localized" regions on the surface of a radiating structure, such as at discontinuities in the geometrical and electrical properties of a surface, and at points of grazing incidence on

a smooth convex surface as illustrated in Fig. 1. In particular, the diffracted rays can enter into the GO shadow as well as the lit regions. Consequently, the diffracted rays entirely account for the fields in the shadow region where the GO rays cannot exist.

"In the first nineteen months of European war, from September 1939 to March of 1941, the island nation of Britain and her allies lost, to U-boat, air, and sea attack, to mines and maritime disaster, one thousand five hundred and ninety-six merchant vessels. It was the job of the Intelligence Division of the Royal Navy to stop it, and so, on the last day of April 1941 . . ." May 1941. At four in the morning, a rust-streaked tramp freighter steams up the Tagus River to dock at the port of Lisbon. She is the Santa Rosa, she flies the flag of neutral Spain and is in Lisbon to load cork oak, tinned sardines, and drums of cooking oil bound for the Baltic port of Malmö. But she is not the Santa Rosa. She is the Noordendam, a Dutch freighter. Under the command of Captain Eric DeHaan, she sails for the Intelligence Division of the British

Royal Navy, and she will load detection equipment for a clandestine operation on the Swedish coast—a secret mission, a dark voyage. A desperate voyage. One more battle in the spy wars that rage through the back alleys of the ports, from elegant hotels to abandoned piers, in lonely desert outposts, and in the souks and cafés of North Africa. A battle for survival, as the merchant ships die at sea and Britain—the last opposition to Nazi German—slowly begins to starve. A voyage of flight, a voyage of fugitives—for every soul aboard the Noordendam. The Polish engineer, the Greek stowaway, the Jewish medical officer, the British spy, the Spaniards who fought Franco, the Germans who fought Hitler, the Dutch crew itself. There is no place for them in occupied France; they cannot go home. From Alan Furst—whom The New York Times calls America’s preeminent spy novelist—here is an epic tale of war and espionage, of spies and fugitives, of love in secret hotel rooms, of courage in the face of impossible odds. Dark Voyage is taut with suspense and pounding with battle scenes; it is authentic, powerful, and brilliant.
