This is the ninth in the 300 series of circuit design books, again contains a wide range of circuits, tips and design ideas.

The book has been divided into sections, making it easy to find related subjects in a single category. The book not only details DIY electronic circuits for home construction but also inspiring ideas for projects you may want to design from the ground up. Because software in general and microcontroller programming techniques in particular have become key aspects of modern electronics, a number of items in this book deal with these subjects only. Like its predecessors in the 300 series, "308 Circuits" covers the following disciplines and interest fields of modern electronics: test and measurement, radio and television, power supplies and battery chargers, general interest, computers and microprocessors, circuit ideas and audio and hi-fi.

Killer Verse: Poems of Murder and Mayhem is a spine-tingling collection of terrifically creepy poems about the deadly art of murder. The villains and victims who populate these pages range from Cain and Abel and Bluebeard and his wives to Lizzie Borden, Jack the Ripper, and Mafia hit men. The literary forms they

inhabit are just as varied, from the colorful melodramas of old Scottish ballads to the hard-boiled poetry of twentieth-century noir, from lighthearted comic riffs to profound poetic musings on murder. Robert Browning, Thomas Hardy, W. H. Auden, Stevie Smith, Mark Doty, Frank Bidart, Toi Derricotte, Lynn Emanuel, and Cornelius Eady are only a few of the many poets, old and new, whose work is captured in this heart-stopping—and criminally entertaining—collection.

During his lifetime Brion Gysin (1916-1986) inspired an array of artists, writers, poets and musicians, notably the Beat Generation. Since his death Gysin's own work has only increased in popularity, yet his radical approach to art defies categorization. *Dream Machine* is the first detailed study of Gysin's oeuvre in both art-historical and contemporary contexts. A devotee of invention, Gysin created paintings, drawings, photo-collages, installations, poetry and sound experiments. He produced the cut-up collage novel *The Third Mind* (1965) with William Burroughs, and with Ian Sommerville developed the *Dreamachine* (1961), a kinetic sculpture designed to induce visions by playing flickering light on the closed eyes of the viewer. This exciting new book, featuring incisive texts, a photo essay, and appreciations by contemporary artists, captures the remarkable daring of an artistic visionary.

This new text, intended for the senior undergraduate finite element course in civil or mechanical engineering departments, gives students a solid basis in the mechanical principles of the finite element method and provides a theoretical foundation for applying available software analysis packages and evaluating the results obtained. Dr. Hutton discusses basic theory of the finite element method while avoiding variational calculus, instead focusing upon the engineering mechanics and mathematical

background that may be expected of a senior undergraduate engineering student. The text relies upon basic equilibrium principles, introduction of the principle of minimum potential energy, and the Galerkin finite element method, which readily allows application of the FEM to nonstructural problems. The text is software-independent, making it flexible enough for use in a wide variety of programs, and offers a good selection of homework problems and examples.
