Information & communication technology (ICT) and the automotive sector are two of the most important industries in the EU and the US. The EU's eastern expansion and economic globalization have reinforced competition on the one hand; on the other hand the importance of outsourcing and off-shoring has increased. Against this background the intensification of innovation dynamics becomes crucial – and with them the role of regional innovation clusters. The analysis examines seven regions and six EU countries. The focus is on cluster and network dynamics in both industries, as regional ICT clusters are playing an increasingly central role in many European regions. Specialization and structural change in the automotive sector are highlighted, and new strategic approaches for multinational companies and changes in policy options are identified.

A Volume in the Wiley-Interscience Series on Laboratory Automation. The complete, step-by-step guide to using Visual Basic(r) in a laboratory setting Visual Basic(r) is fast becoming the de facto laboratory programming language, yet existing books typically discuss applications that have nothing to do with science and engineering. This primer fills the gap in the field, showing professionals seeking to improve the productivity of their laboratories how to use Visual Basic(r) to automate laboratory processes. Automating Science and Engineering Laboratories with Visual Basic(r) helps laboratory professionals decide when and if to use Visual Basic(r) and how to combine it with the many computing technologies used in modern laboratories such as RS-232 port communications, TCP/IP networking, and event-driven control, to name a few. With an emphasis on getting readers programming immediately, the book provides clear guidelines to the appropriate programming techniques as well as custom-developed software tools. Readers will learn how to build applications to control laboratory instruments, collect and process experimental data, create interactive graphical applications, and more. Boasting many working examples with the complete source code and backward compatibility to previous versions of Visual Basic(r), Automating Science and Engineering Laboratories with Visual Basic(r) is an indispensable teaching tool for nonprogrammers and a useful reference for more experienced practitioners.

This clear and concise book is designed to demystify the process of writing in APA style and format. With precise examples (both writing examples and Microsoft Word screenshots), An EasyGuide to APA Style 2e points out common APA style and formatting mistakes and how to avoid them. The book also provides an overview of the style and formatting changes for the 6th edition of the APA Publication Manual, providing detailed examples and complete sample student papers written to conform to APA format. The authors illustrate not only how to write using APA style, but also what writing in APA style really looks like when your paper is complete. Written in a conversational and clear style, this guide will help anyone find their way through the maze of rules in the APA Publication Manual and become proficient in learning the fine points of APA style. The second edition of the EasyGuide contains additional writing tips and expanded discussions in each chapter. In particular, chapter 5 on plagiarism has been expanded to include more detail on topics like when and how to paraphrase appropriately and when to quote directly from a source. Also, the new edition provides examples from the latest version of Microsoft Word, Word 2010.
