Dizzy Gillespie was one of the most important and best-loved musicians in jazz history. With his horn-rimmed glasses, goatee, jive talk, and upraised trumpet bell, he was the hipster who most personified bebop. The musical heir to Louis Armstrong, he created the modern jazz trumpet-playing style and dazzled aficionados and popular audiences alike for over 50 years. In this first full biography, Alyn Shipton covers all aspects of Dizzy's remarkable life and career, taking us through his days as a flashy trumpet player in the swing bands of the 1930s, his innovative bebop work in the 1940s, the worldwide fame and adoration he earned

through his big band tours in the 1950s, and the many recordings and performances which defined a career that extended into the early 1990s. Along the way, Shipton convincingly argues that Gillespie--rather than Charlie Parker as is widely believed--had the greatest role in creating bebop, playing in key jazz groups, teaching the music to others, and helping to develop the first original bebop repertory. Shipton also explores the dark side of Dizzy's mostly sunny personal life, his womanizing, the illegitimate daughter he fathered and supported--now a respected jazz singer in her own right--and his sometimes needless cruelty to others. For anyone interested in jazz and one of its most innovative and appealing figures, *Groovin' High* is essential

Principles of Asynchronous Circuit Design - A Systems Perspective addresses the need for an introductory text on asynchronous circuit design. Part I is an 8-chapter tutorial which addresses the most important issues for the beginner, including how to think about asynchronous systems. Part II is a 4-chapter introduction to Balsa, a freely-available synthesis system for asynchronous circuits which will enable the reader to get hands-on experience of designing high-level asynchronous systems. Part III offers a

number of examples of state-of-the-art asynchronous systems to illustrate what can be built using asynchronous techniques. The examples range from a complete commercial smart card chip to complex microprocessors. The objective in writing this book has been to enable industrial designers with a background in conventional (clocked) design to be able to understand asynchronous design sufficiently to assess what it has to offer and whether it might be advantageous in their next design task.

Water Consciousness Manning Publications Associative Networks: Representation and Use of Knowledge by Computers is a collection of

papers that deals with knowledge base of programs exhibiting some operational aspects of understanding. One paper reviews network formalism that utilizes unobstructed semantics, independent of the domain to which it is applied, that is also capable of handling significant epistemological relationships of concept structuring, attribute/value inheritance, multiple descriptions. Another paper explains network notations that encode taxonomic information; general statements involving quantification; information about processes and procedures; the delineation of local contexts, as well as the relationships between syntactic units and their interpretations. One paper shows that networks can be designed to be intuitively and formally interpretable. Network formalisms are computer-oriented logics which become distinctly significant when access paths from

concepts to propositions are built into them. One feature of a topical network organization is its potential for learning. If one topic is too large, it could be broken down where groupings of propositions under the split topics are then based on "co-usage" statistics. As an example, one paper cites the University of Maryland artificial intelligence (AI) group which investigates the control and interaction of a meaning-based parser. The group also analyzes the inferences and predictions from a number of levels based on mundane inferences of actions and causes that can be used in AI. The collection can be useful for computer engineers, computer programmers, mathematicians, and researchers who are working on artificial intelligence.
