To most people, cars are just appliances to be disposed of when they rust, become unreliable, or are outgrown. But to car people, it's different.

Cars are like photographs that occupy physical space. They hold aromas that trigger memories, and remind us of who we once were. In addition, to some people, the relationship with the car itself is a real thing. Many enthusiasts pine for the cars of their youth, regret that they ever let them go, and yearn and search for them the way people do with old lovers, hoping to find them and rekindle that old spark. In Resurrecting Bertha, Rob Siegel assures you that

this is normal (well, as normal as anything is with car people), and embarks on this journey himself. Writing in his trademark Hack Mechanic voice that's enthralled readers for 35 years, Rob describes his original eight-year relationship with his highly-modified 1975 BMW 2002 "Bertha," selling the car to a dear friend, its 26 years of storage, and buying it back in a weak whisky-soaked moment only to experience the "oh dear God what did I

just do" regret when he raises the long-closed garage door and comes face-to-face with the badly deteriorated car. The book details the steps Rob went through to get the car running, then driving, then sufficiently sorted to make a 2000-mile drive, and how the reconnection with the car was so much deeper than he expected. Resurrecting Bertha is about more than just the nuts and bolts; it's about deciding what's important, the joy of doing good, and

how, if you do it right, not only can you go home again, but you can do so in the same car.

Excerpt from Charles Pettigrew, First Bishop-Elect of the North Carolina Episcopal Church As soon as he received the news of his appointment, Pettigrew resigned his position in Bute County and moved to Edenton. He became a member of the Church of England about this time

and obtained a position as lay reader of St. Paul's Church in Edenton. Since several members of the vestry of St. Paul's Parish were trustees of the academy, it is reasonable to assume that he had contacted these men and made known to them his desire to become a minister of the Church of England. Whether or not that View is correct, it is known that while occupying the positions

of schoolmaster and lay reader he engaged in the studies expected of candidates for ordination in that church. In the spring of 1775 he sailed for London where he was duly ordained deacon and priest by the bishops of London and Rochester. selecting refrigerant so that the a/c blows cold enough to be usable. Although the book draws from Rob's BMW experience (with specifics for the BMW 2002 and 3.0CS), and concentrates on vintage a/c systems (those that have flare fittings and originally contained R12), most of the information applies to any air conditioning system, foreign or domestic, vintage or modern. Written in Rob's entertaining Hack

Mechanic narrative voice, and including 240 photographs and illustrations, the book covers theory, the choice of refrigerant (R12, R134a, other EPA-approved, non-EPA-approved), legality, tools for a/c work, fittings and sizes, the compressor, the evaporator assembly and expansion valve or orifice tube, the condenser and fan, the receiver/drier or accumulator, electrical connections and compressor cycling,

connecting and using manifold gauges, the basic steps for a/c rejuvenation, from-scratch a/c retrofit, making and installing hoses, flushing the system, pressure-testing and leak detection, evacuating and charging the system troubleshooting, and other things that heat up the cabin. This fascinating book provides a stimulating introduction to analog electronics by analysing the design and construction of a radio transceiver. Essential theoretical background is given along with carefully designed laboratory and homework exercises. The author begins with

a thorough description of basic electronic components and simple circuits and goes on to describe the key elements of radio electronics, including filters, amplifiers, oscillators, mixers, and antennas. Laboratory exercises lead the reader through the design, construction, and testing of a popular radio transceiver (the NorCal 40A). A diskette containing the widely known circuit simulation

software, Puff, is included in the book. This was the first book to deal with elementary electronics in the context of radio. It can be used as a textbook for introductory analog electronics courses, for more advanced undergraduate classes on radio-frequency electronics, and will also be of great interest to electronics hobbyists and radio enthusiasts. Discover (or rediscover) the fun and magic of building electronic circuits with thermatrons (vacuum tubes). This book has everything you need to know about the art and science of thermatron design and construction. It pulls together, in one easy to read book, thermatron types and characteristics, thermatron homebrew techniques, and how to design audio and RF triode and pentode circuits. The book is written primarily for radio amateurs (or audio equipment builders)

that already understands basic electronics but have forgotten or never had the pleasure of working with hollow-state devices. The Second Edition includes over 50+ pages of new and revised material including a new chapter on thermatron oscillator design.

During the twelve-day trip, he finds that what

began as a story of man-versus-machine turns into something else entirely--a story of the kindness of strangers, and how doors sometimes open exactly when you need them to. "Rob Siegel is a writer with the mind of a mechanic and a mechanic with the mind of a writer. He's also an old-school romantic of the best kind, and one of the few people who understands what car culture really means to the people invested in it-free of stereotype, cliché, or pat sentiments you've read a thousand times before. Like all of his writing, Ran When

Parked focuses heavily on the why behind the hobby. It's a mix of casual, long-form blog entry; detailed how-to; and emotive confessional; most of all, he seems to believe the world would be a better place if everyone else followed on his crazy path and devoted their free time to resurrecting old iron.
