This book is one out of 8 IAEG XII Congress volumes, and deals with the theme of urban geology. Along with a rapidly growing world population, the wave of urban growth continues, causing cities to swell and new metropolitan

centers to emerge. These global trends also open new ventures for underground city development. Engineering geology plays a major role in facing the increasing issues of the urban environment, such as: finding aggregates for construction works; providing adequate water supply and waste management; solving building problems associated to geological and geomorphological conditions; evaluating host rock conditions for underground constructions; preventing or mitigating geological and seismic hazards. Furthermore, this book illustrates recent advancements in sustainable land use planning, which includes conservation, protection, reclamation and landscape impact of open pit mining and alternative power generation. The Engineering Geology for Society and Territory volumes of the IAEG XII Congress held in Torino from September 15-19, 2014, analyze the dynamic

role of engineering geology in our changing world and build on the four main themes of the congress: environment, processes, issues and approaches. Increasing numbers of ecologists and conservation biologists have begun to explore the use of drone technology to obtain accurate and up-to-date data on the distribution and density of species, as well as the threats to their habitats, in their ongoing

attempts to conserve and monitor biodiversity. Conservation drones are low-cost, autonomous, and operator-friendly unmanned aerial vehicles that can be used for surveying, mapping, and monitoring both habitat and biodiversity. They are fast becoming a valuable complement to ground-based surveys and satellite imagery for a wide range of ecological and conservation applications. The authors pioneered the use of conservation drones for the purpose of monitoring orangutan populations in Southeast Asia. They subsequently founded ConservationDrones.org to share their knowledge of building and using drones with colleagues in the wider environmental community. This website has proved highly popular and this book aims to further build

---

capacity to use drones and inspire others to adapt emerging technologies for practical conservation.

very apt. It could take just sixty minutes to look through the book or you may want to look through sixty times who knows? It spans a sixty-year period of life which has passed by my lens. I have selected the most memorable ones, which are likely to mean more to viewers beyond the family circle so to speak. Photography can be so, so personal I have found. Many of these images can never be repeated. Some will stand the test of time better than others. I would like to think that British Amateur Photojournalism never dies and ordinary people such as myself can and will make the effort to continue recording for posterity. In black and white please, it has for me and many enthusiasts alike, an archaic charm that no other art form can beat.
