¿Qué es la televisión láser? La televisión en color con láser, o la pantalla de video en color con láser, utiliza dos o más rayos ópticos (láser) modulados individualmente de diferentes colores para producir un punto combinado que se escanea y proyecta en el plano de la imagen mediante un sistema de espejo poligonal o, con menor eficacia, mediante medios optoelectrónicos para producir una pantalla de televisión en color. Los sistemas funcionan escaneando la imagen completa, un punto a la vez y modulando el láser directamente a alta frecuencia, muy parecido a los haces de electrones en un tubo de rayos catódicos, o extendiendo ópticamente y luego modulando el láser y escaneando una línea a la vez. , la propia línea se modula de la misma manera que con el procesamiento de luz digital (DLP).

What Is Laser TV Laser color television, or laser color video display utilizes two or more individually modulated optical (laser) rays of different colors to produce a combined spot that is scanned and projected across the image plane by a polygon-mirror system or less effectively by optoelectronic means to produce a color-television display. The systems work either by scanning the entire picture a dot at a time and modulating the laser directly at high frequency, much like the electron beams in a cathode ray tube, or by optically spreading and then modulating the laser and scanning a line at a time, the line

itself being modulated in much the same way as with digital light processing (DLP).
