The Artists Laboratory series presents the more experimental and less familiar work of contemporary artists, opening up the creative process to explore the conceptual and practical concerns with which they engage. In recent years Stephen Farthing has investigated the back story of paintings, his own and those by other artists, using drawing and painting to understand their character, content and form. Examining the art-historical classifications that define the pictures, the narratives that have informed their content or the patterns they share with other works, he sifts and organises the information in drawings, and proposes conclusions in paintings. David Scott Kastan responds to this body of work, published here for the first time, with an eloquent analysis of several key pieces, while Farthing and his fellow artist Stephen Chambers discuss subjects ranging from the attitude required to write about a painting and the role that text can play in making one, to the differences in working on either side of the Atlantic.

**Mustard Lung: Diagnosis and Treatment of Respiratory Disorders in Sulfur-Mustard Injured Patients** brings together the details regarding pathophysiology, medication, and protective issues to provide a comprehensive look at health problems associated with sulfur mustard injury. It provides a bench-to-bedside look at the long term complications of vesicant exposure in humans as well as how mustard gas exposure affects lung function. By providing guidelines and approaches for the diagnosis, pathogenesis, and treatment of SM injury cases, this book is helpful for a wide range of medical researchers and clinicians. For decades, chemical respiratory disorders were diagnosed and managed traditionally similar to other chronic respiratory diseases. However, the exact nature of chemical respiratory disorders is different and needs to be treated as such. Includes the most up-to-date basic and clinical research findings on sulfur mustard from top researchers Provides information on chemical agents, complications that arise due to sulfur mustard exposure, and drugs available to treat injuries Contains an appendix with practical prescription recommendations for patients affected by mustard lung Provides a bench-to-bedside look at the long term complications of vesicant exposure in humans as well as how mustard gas exposure affects lung function

For those who find themselves in a battle for public records, *Access with Attitude: An Advocate's Guide to Freedom of Information in Ohio* is an indispensable weapon. First Amendment lawyer David Marburger and investigative journalist Karl Idsvoog have written a simply worded, practical guide on how to take full advantage of Ohio's so-called Sunshine Laws. Journalists, law firms, labor unions, private investigators, genealogists, realty companies, banks, insurers—anyone who regularly needs access to publicly held information—will find this comprehensive and contentious guide to be invaluable. Marburger, who drafted many of the provisions that Ohio adopted in its open records law, and coauthor Idsvoog have been fighting for broader access to public records their entire careers. They offer field-tested tips on how to avoid “no,” and advise readers on legal strategies if their requests for information go unmet. Step by step, they show how to avoid delays and make the law work. Whether you're a citizen, a nonprofit organization, journalist, or attorney going after public records, *Access with Attitude* is an essential resource.

The 1999 Hemingway centennial marks the perfect time for the reevaluation of his position as America's premier modernist writer. These essays, all written specially for this collection, plumb unexplored historical details of Hemingway's life to illuminate new and often unexpected dimensions of the force of his literary accomplishment. Discussing biographical details of his personal and professional life along with the subtleties of his character, the text includes a number of fascinating photos and images.

*Annals of Gynæcology* Elsevier

Focuses on the analysis, optimization and controllability of time-discrete dynamical systems and games under the aspect of stability, controllability and (for games) cooperative and non-cooperative treatment. The investigation of stability is based on Lyapunov's method which is generalized to non-autonomous systems.

Optimization and controllability of dynamical systems is treated, among others, with the aid of mapping theorems such as implicit function theorem and inverse mapping theorem. Dynamical games are treated as cooperative and non-cooperative games and are used in order to deal with the problem of carbon dioxide reduction under economic aspects. The theoretical results are demonstrated by various applications.

This book brings together aspects of statistics and machine learning to provide a comprehensive guide to evaluating, interpreting and understanding biometric data. It naturally leads to topics including data mining and prediction to be examined in detail. The book places an emphasis on the various performance measures available for biometric systems, what they mean, and when they should and should not be applied. The evaluation techniques are presented rigorously, however they are always accompanied by intuitive explanations. This is important for the increased acceptance of biometrics among non-technical decision makers, and ultimately the general public.

This complete box set includes all 6 books in the Manipulated series. Save over 60% the total price of the titles purchased individually. What if the sky was deadly? Fin has never stepped foot on the surface of the Earth. Working the mines, deep below, has been the only life she's ever known. The underground is nothing more than an existence of sweat and monotony in service to the Enhanced Human Coalition--the genetically-modified who control the underground from the world above. Every Dweller underground understands that you serve the EHC up top, or you don't eat. Two hundred years after the planet's magnetic poles began to flip, Earth's surface has become irradiated and unsustainable. As the land, water, and even the air grew toxic, the underprivileged were doomed to a life of hard labor underground, while the Enhanced Human Coalition on the surface enjoy their spoils. But now, Fin and her friends discover a stolen piece of EHC tech that modifies genetics, giving them the abilities of those up top--varied levels of increased strength, intelligence, and adaptation to the surface's harsh conditions. The theft of this technology triggers a manhunt, forcing them to flee to the most dangerous place they could possibly go... aboveground. Can she save a world broken in two? Fans of The Maze Runner, Configured, and Influence will devour this fast-paced, innovative sci-fi adventure. "A gripping sci-fi dystopian thriller."- "This is a book that will grab you from the first page and draw you in until the very end."- What are you waiting for? Es Gibt Zwei Arten Von Menschen Reiter Und Solche Die Es Gerne W ä ren Notizbuch John Wiley & Sons

Mapping the Epidemic: A Systemic Geography of COVID-19 in Italy provides a theoretical-methodological framework based on space-time analysis to map and interpret the set of factors that could have contributed to the spread of COVID-19, as well as a reflexive cartographic mapping visualizing the virus ' s dynamics. After an introduction that constitutes the theoretical anchor of the work carried out both with respect to territorial analysis and the use of reflexive cartography, the book discusses the role played by reflexive cartography in research on the COVID-19 pandemic conducted by an Italian university working group dealing with reticularity and the territorial fragilities that have influenced the spread. The data, subjected to analysis, are translated into reflexive cartography as a tool for restitution and investigation of the territorial dynamics. Each chapter consists of detailed information in which the European context of data analysis is illustrated, to then investigate the Italian territory and focus on the case of Lombardy and, in particular, of Bergamo as the epicenter. The book addresses the theoretical and methodological approaches of mapping the epidemic in Italy and the importance of cartography in the outbreak response, as well as including data accounting for contributing factors such as atmospheric pollution and infection rate, population distribution and major mobility corridors, and measures adopted to contain the outbreak, by implementing mapping at the regional Lombard, national, and European levels. Mapping the Epidemic: A Systemic Geography of COVID-19 in Italy uses an interdisciplinary approach that highlights the key role of geography and cartography in providing usable data and conclusions on the virus outbreak and will be valuable for researchers and professionals in the fields of geography, GIS, and spatial mapping, as well as statisticians working on mapping outbreaks and epidemiological scientists needing mapping data on the virus. Details reflexive mapping of the COVID pandemic, giving an interpretation that explains the epidemic ' s variable complexity and visualizes it Provides a space-time approach, based on a database from the beginning of the Italian emergence to the decline phase, showing the virus spread intensity and speed in relation to socio-territorial factors Is complementary to studies carried out in the biomedical domain, referring to the results of these studies in an original and innovative way, envisaged through cybercartography
