This book brings together aspects of statistics and machine learning to provide a comprehensive guide to evaluating, interpreting and understanding biometric data. It naturally leads to topics including data mining and prediction to be examined in detail. The book places an emphasis on the various performance measures available for biometric systems, what they mean, and when they should and should not be applied. The evaluation techniques are presented rigorously, however they are always accompanied by intuitive explanations. This is important for the increased acceptance of biometrics among non-technical decision makers, and ultimately the general public.

A Historical Guide to Ernest Hemingway Seven Seas Entertainment

In a hard-hitting novel about fitting in—or not—Anthony “Ant” Jones gets transported from his East Cleveland hood to an almost all-white prep school and has to figure out where he belongs...before he loses himself entirely. *Black Boy White School* is a memorable debut that will appeal to fans of Walter Dean Myers and Sherman Alexie. Anthony has never been outside his rough neighborhood when he receives a scholarship to Belton Academy, an elite prep school in Maine. But at Belton things are far from perfect. Everyone calls him “Tony,” assumes he’s from Brooklyn, expects him to play basketball, and yet acts shocked when he fights back. As Anthony tries to adapt to a world that will never fully accept him, he’s in for a rude awakening: Home is becoming a place where he no longer belongs. In debut author Brian F. Walker’s honest and dynamic novel about staying true to yourself, Anthony might find a way to survive at Belton, but what will it cost him?

Focuses on the analysis, optimization and controllability of time-discrete dynamical systems and games under the aspect of stability, controllability and (for games) cooperative and non-cooperative treatment. The investigation of stability is based on Lyapunov's method which is generalized to non-autonomous systems. Optimization and controllability of dynamical systems is treated, among others, with the aid of mapping theorems such as implicit function theorem and inverse mapping theorem. Dynamical games are treated as cooperative and non-cooperative games and are used in order to deal with the problem of carbon dioxide reduction under economic aspects. The theoretical results are demonstrated by various applications.

Following the disastrous Java Sea campaign, the Allies went on the offensive in the Pacific in a desperate attempt to halt the Japanese forces that were rampaging across the region. With the conquest of Australia a very real possibility, the stakes were high. Their target: the Japanese-held Solomon Islands, in particular the southern island of Guadalcanal. Hamstrung by arcane pre-war thinking and a bureaucratic mind-set, the US Navy had to adapt on the fly in order to compete with the mighty Imperial Japanese Navy, whose ingenuity and creativity thus far had fostered the creation of its Pacific empire. Starting with the amphibious assault on Savo Island, the campaign turned into an attritional struggle where the evenly matched foes sought to grind out a victory. Following on from his hugely successful book *Rising Sun, Falling Skies*, Jeffrey R. Cox tells the gripping story of the first Allied offensive of the Pacific War, as they sought to prevent Japan from cutting off Australia and regaining dominance in the Pacific.

Fin has never stepped foot on the surface of the Earth. Working the mines, deep below, has been the only life she's ever known. The underground is nothing more than an existence of sweat and monotony in service to the Enhanced Human Coalition--the genetically-modified who control the underground from the world above. Every Dweller underground understands that you serve the EHC up top, or you don't eat. Two hundred years after the planet's magnetic poles began to flip, Earth's surface has become irradiated and unsustainable. As the land, water, and even the air grew toxic, the underprivileged were doomed to a life of hard labor underground, while the Enhanced Human Coalition on the surface enjoy their spoils. But now, Fin and her friends discover a stolen piece of EHC tech that modifies genetics, giving them the abilities of those up top--varied levels of increased strength, intelligence, and adaptation to the surface's harsh conditions. The theft of this technology triggers a manhunt, forcing them to flee to the most dangerous place they could possibly go... aboveground. Can she save a world broken in two? *Mapping the Epidemic: A Systemic Geography of COVID-19 in Italy* provides a theoretical-methodological framework based on space-time analysis to map and interpret the set of factors that could have contributed to the spread of COVID-19, as well as a reflexive cartographic mapping visualizing the virus's dynamics. After an introduction that constitutes the theoretical anchor of the work carried out both with respect to territorial analysis and the use of reflexive cartography, the book discusses the role played by reflexive cartography in research on the COVID-19 pandemic conducted by an Italian university working group dealing with reticularity and the territorial fragilities that have influenced the spread. The data, subjected to analysis, are translated into reflexive cartography as a tool for restitution and investigation of the territorial dynamics. Each chapter consists of detailed information in which the European context of data analysis is illustrated, to then investigate the Italian territory and focus on the case of Lombardy and, in particular, of Bergamo as the epicenter. The book addresses the theoretical and methodological approaches of mapping the epidemic in Italy and the importance of cartography in the outbreak response, as well as including data accounting for contributing factors such as atmospheric pollution and infection rate, population distribution and major mobility corridors, and measures adopted to contain the outbreak, by implementing mapping at the regional Lombard, national, and European levels. *Mapping the Epidemic: A Systemic Geography of COVID-19 in Italy* uses an interdisciplinary approach that highlights the key role of geography and cartography in providing usable data and conclusions on the virus outbreak and will be valuable for researchers and professionals in the fields of geography, GIS, and spatial mapping, as well as statisticians working on mapping outbreaks and epidemiological scientists needing mapping data on the virus. Details reflexive mapping of the COVID pandemic, giving an interpretation that explains the epidemic's variable complexity and visualizes it Provides a space-time approach, based on a database from the beginning of the Italian emergence to the decline phase, showing the virus spread intensity and speed in relation to socio-territorial factors Is complementary to studies carried out in the biomedical domain, referring to the results of these studies in an original and innovative way, envisaged through cybercartography
